

Abbotsford, Sumas & Matsqui News

Twelfth Year, No. 3.

Abbotsford, B.C., Wednesday, January 16th, 1935.

Ten Cents per Month.

Football

At a meeting of the Fraser Valley Football League, held in Mission last Thursday, the protest of Mission against the game they played at Langley last Saturday, came up for discussion. Mission declared that the field was unplayable, and that Langley's win should be disallowed.

In the ensuing discussion, however, the statement was made that Langley had not entered in the league cup competition, and were therefore ineligible to play for the other trophies. The meeting passed a motion accordingly.

In a redraw for the Hill-Tout cup, made necessary by Langley's expulsion, Abbotsford have to journey to Coquitlam.

The secretary or manager of the Langley football team will receive in the mail this week a letter from the secretary of the Fraser Valley Football League, saying that they are not allowed to compete for any of the cups, and that their two victories, over Highland United and Mission, are thrown out.

This, no doubt, will make the Langleyites highly indignant, and in our opinion, rightly so.

Langley is not a football town. Interest in the game there is not at the keen pitch it is here. Consequently, their football team has a struggle to be in existence. Rather than entering the league and defaulting half their games because they could not afford to travel (which same spirit has not been shown by another team), they did not enter at all. Now, when they have a chance to participate, they are disallowed.

This does not seem to us to be in the best interests of football in the Valley. The league is short of teams as it is, and to deliberately affront a team will not help matters. Langley have always played the game. Three seasons ago, rather than default they journeyed to Kilgord with nine men, and took a terrific beating with a smile. They are an old team in the Valley and their expulsion savors a little of pettiness rather than good sportsmanship.

Repeat order, of a crate of S. C. White Leghorn poultry was shipped to Basildon, Sussex, England yesterday by F. C. Evans, Echo Poultry Farm. The shipment, which goes via Panama Canal, comprises two pedigreed cockerels and six R.O.P. hens.

Weather Permitting—
Sumas Ratepayers' Association
RATEPAYERS MEETING
is called in Whatcom Road Hall for **SATURDAY, JANUARY 19** at 8 p.m.
for the purpose of discussing various details of municipal business. All Ratepayers, Candidates and Members of Council and School Board Invited.
J. FISHLOCK, Sec.

MATSQUI

Mrs. Moe entertained a few friends last week, the occasion being Mr. Moe's birthday.

Mrs. T. Lancaster Jr. entertained members of the Mission band at her home last week. Mrs. Lancaster, who resigned as leader of the band recently, was presented with a pair of vases.

Prize-winners at the whist drive held in Ridgedale hall on Wednesday by the Progressive Club were Mrs. H. Borg, Mrs. E. L. Roberts, Mr. Johannasen and Mr. Len Swanson.

Matsqui branch of the Socialist Party of Canada will meet in Hurum on Jan. 21. Speakers will be Rev. E. H. Baker, Mr. F. Wilson and Mr. W. Mandale, nominees for the nominating convention.

Mr. Jack Little is building a new milk house and brooder houses on his property.

Wardens of Matsqui Game Protective Association, under an arrangement with the Game Board, are scattering grain on Matsqui for starving birds.

The monthly meeting of the Ladies' Auxiliary to the M.-S.-A. hospital will be held at the home of Mrs. A. N. S. Beaton on Thursday, January 24th, at 3 p.m.

The annual business meeting of the Lutheran Ladies' Aid was held last Thursday. Officers were elected as follows: Mrs. J. Kempf, president; Mrs. H. Wick, vice-president; Mrs. J. Igeland, secretary and Miss H. Kempf, treasurer.

Mr. and Mrs. T. R. Igeland have returned to Seattle to take up residence.

The Baptist Ladies Aid will hold its monthly meeting at the home of Mrs. C. Flodin on Thursday, January 17th.

Born.—To Mr. and Mrs. O. T. Jacobson, Matsqui, on January 19, in St. Mary's hospital, Vancouver, a daughter.

A lane is being cleared between the McCallum and Wright roads in Matsqui municipality.

H. C. Green, former school trustee, is expected to be a candidate as councillor in ward three, Matsqui.

Arthur Gustafson of Matsqui Falls Victim of Pneumonia

Arthur Albert Gustafson, son of Mr. and Mrs. Gustafson, Sr. of Matsqui, passed away last Wednesday in his 37th year. He was stricken with pneumonia a few days previously and taken to the Mission hospital. He appeared to be recovering, when he suddenly expired.

The late Mr. Gustafson is well-known young farmer of Matsqui, where he has lived most of his life. He was born in Polk County, Minnesota.

Surviving are his widow and five young children. Also his parents, one brother Carl W. Gustafson, and one sister, Edith Gustafson, both residing in Matsqui.

The funeral was held on Saturday and largely attended, many beautiful wreaths being bestowed. Services were conducted in the Lutheran church, Matsqui and at the graveside. Interment was made in Hazelwood cemetery, St. Nicholas.

Village Fiscal Affairs Sound

Annual Report Discloses

Assets of the Village of Abbotsford amount to a value of \$25,365.29. More than two thousand dollars in excess of the previous year—it is shown by the annual financial statement of the Corporation, published in this issue of The News. Largest item in the list of assets is the waterworks, valued at \$9,669.42. Other real assets, acquired since the town incorporated ten years ago are the Jubilee grounds and park, fire-fighting equipment, municipal building, swimming pool, street lighting equipment and property (lot) in the village, the latter valued at \$3,050.00.

Statement of receipts shows the water system to be the most profitable source of income—\$3,197.22—an utility that pays for itself every three years or so. Ordinary tax collections amount to \$900 less than the water, with trade licenses at \$2,135.50. The government grant last year was \$544.05. Receipts for the year were \$11,927.75.

Expenditure items included \$1,471 for roads, \$828 for sidewalks, \$1,105 for street lighting, \$1,391 for salaries and indemnities. "Capital" expense items included \$2,000 for the Jubilee grounds, \$1,391 for municipal buildings (library), and \$1,621 for water service, part of which is maintenance. Total liabilities of the Village amount to \$296.37—miscellaneous current accounts.

The statement reveals Abbotsford to be a prosperous little municipal "business" enjoying a source of steady income substantially in excess of its current bare-necessity requirements—actually one of the most encouraging municipal statements published in this Valley.

B. C. ELECTRIC LEASES UPTOWN CORNER STORE IN ABBOTSFORD

The large corner store in the Atan-gard hotel block has been leased for a period of five years by the B. C. Electric Railway Co. for retail store purposes. Offices will be installed for the service department, and full use of the display windows will be made for the showing of the many electrical appliances which the company sells.

For many years the Abbotsford retail store and service department has occupied the railway station annex. The new location, on the town's main business corner, affords a much more attractive sales opportunity, and the large, modern premises greater convenience for service management.

Mr. and Mrs. A. M. King returned last week from Portland, Ore., where they visited their son-in-law and daughter, Mr. and Mrs. Miller.

Approximately one-fifth of the pupils of Mission schools were absent from class last month through a scarlet fever outbreak.

Game Warden Williams is busy distributing grain on Sumas for hungry birds.

M.-S.A. General Hospital

Matron's report for December—In hospital Dec. 1, 6 patients; admitted 26; new-born 9; discharged 29; in hospital Jan. 1, 12.

Medical cases 6; major operations 5; minor ops. 5; fractures 3; obstetrical 10; t.b. 2; new born 10.

Residence of patients—Matsqui 28; Abbotsford 5; Sumas 3; Ladysmith 1; Chilliwack 1; Rosedale 1; Unorganized 2. Indian days 1; t.b. days 43; ordinary days 331.

B. C. GROWERS TO CONVENE

The second annual convention of British Columbia Growers' Association is to be held in New Westminster on January 25 and 26, commencing at 10 a.m. Friday morning.

One of the most important matters coming up is the proposed marketing scheme, which has required a lot of time in an effort to adopt a code satisfactory alike to the Vancouver Island and Lower Mainland growers.

Notice to Milk Producers

IMPORTANT NOTICE is herewith given that all producers of milk must affiliate with an Agency to be designated by the Commodity Board. Phone 173W for more details.
J. L. STARR.

TENDERS CALLED FOR

SUMAS HIGHWAY WORK

Tenders are called by the provincial department of public works for crushed-rock surfacing of the Inter-provincial highway between Abbotsford and Sumas pumping station. These bids will be opened in public upon the day received—January 21. Agitation for surfacing of this section of highway has been conducted by the Board of Trade for the past twelve months.

Commissioner of B. C. Police has sent a code of regulations to the Minister of Education covering suggested control of children carried on school buses, and appointment of monitors to regulate embarking and disembarking of pupils. Copies of the code are being printed and circulated in Mission and other Valley municipalities.

Mr. W. Scott of Clayburn fell ill on Sunday, and was taken to the local hospital for treatment.

Snow drifts tied up the Sumas-Abbotsford High School bus on Sumas Prairie this week.

Thunderstorms Here in Winter

Poplar residents report that thunder and lightning accompanied the snowstorm this morning. Lightning has appeared in a northerly and easterly direction upon several occasions this winter.

Corporation of the District of Sumas, B.C.

Ward Schedules 1934

The following ward schedules are made available for ratepayers previous to nomination day. A complete financial report is expected to be available by Monday next, and is to be made a supplement of this paper next Wednesday.

SCHEDULE 3	
Ward One Expenditures	
Campbell Rd.	6.50
Kenny Rd.	28.00
Boundary Rd.	39.40
Parberry Bridge	438.33
Cameron Rd.	29.00
Yale Rd.	135.79
Farmer Rd.	26.00
McCallum Rd.	60.00
Sidewalk	219.18
Riverside Rd.	8.40
Munroe Rd.	111.13
Whitcom Rd.	16.40

New Body Lines and More Room in 1935 Ford V-8

THE largest and roomiest cars Ford has ever built, with new body lines of advanced streamline design, are illustrated above in this Ford V-8 de luxe Tudor sedan for 1935. Sedans seat six passengers in comfort. Luxurious appointments are new. The eleven body types are all finished in new baked enamel which is said to need only washing to restore its high lustre. Cars are approximately eight inches longer from bumper to bumper and seats are wider. Chassis improvements, including moving the engine forward more than eight inches and new spring suspension, add to riding comfort, especially of rear seat passengers. Directed-flow crankcase ventilation is an improvement of the 90 horsepower V-8 engine.

A New Year Gift to Your Family!

Radiant Heat or **Convenient Cooking**
By the **Master Oil Burner**
"Master Oil Burners are equipped with a patented baffle top—it is the only domestic oil burner scientifically designed to assure perfect combustion of oil vapors and air and produce a steady flame on the outer wall of the burner, thereby giving an all-round even distribution of heat.

With a "Master" the oven, the sides and the back of the stove as well as the top receive an equal degree of heat.

WORLD HAPPENINGS BRIEFLY TOLD

Hay may now be imported duty-free from Canada for use in the drought areas of the United States.

Circumnavigation of the world by air in 114 hours is the latest ambition of Clyde Pangborn, veteran of the long-distance sky lanes.

The government of Bolivia has issued a general mobilization decree which includes the conscripts of the 1936 period and the reservists of 1911 and 1914.

By strict economy, and without tax increases or salary reductions, Austria has almost balanced its budget, Finance Minister Dr. Karl Buresch announced.

Great Britain and the Dominions have been the first among the nations to emerge from the world depression, Sir Maurice Hankey, secretary of the British cabinet, told the Canadian Club at Ottawa.

Russia is preparing for monthly stratospheric flights during 1935 at a 60,000-foot altitude, Prof. Prokovieff said during a meeting with Prof. August Piccard and Max Cosyns, electrical engineer associated with Piccard.

Gladstone Murray, a Canadian, has been appointed acting program controller of the British Broadcasting Corporation. He replaces Col. Alan Dawnay, who has been ordered away on an extended sick leave by his doctor.

Little Journeys In Science

LIGHT WAVES

(By Gordon H. Guest, M.A.)

Science believes that light is due to a succession of wave-pulses produced in the ether by vibrating electrons, which are found in all atoms. Every solid body, if its temperature is above absolute zero (-273 deg. C.) gives off waves of different lengths.

Bodies at low temperatures give off long waves, which are called heat-waves. These waves produce the sensation of warmth, but cannot be seen. As the temperature rises the waves become shorter and shorter. As a general rule, a body does not glow if its temperature is below 525 deg. C. When a solid such as iron or platinum is heated to 525 deg. C., it becomes faintly red. This means that it is producing waves which are short enough to be detected by the human eye. As the temperature of a body rises, it gives off light-waves of shorter and shorter length, along with longer heat-waves. At 900 deg. C. the body changes to cherry red, at 1300 deg. it is white-hot, while at 1400 deg. C. or above it is blue-white in appearance. Beyond this region the waves are invisible and are known as ultra-violet rays. These rays are very useful in the treatment of certain diseases. They penetrate clear fused quartz, which can now be produced commercially, but they are stopped by ordinary window-glass. The infra-red rays are also invisible, but their waves are of greater length than those of visible light. X-rays, as well as the rays from radium, have wave-lengths shorter than the ultra-violet. The rays used in wireless telegraphy, known as Hertzian electric waves, are much longer than the other rays.

Some bodies emit light much below 525 C., that is, below the temperature of incandescence. These bodies are known as luminescent and certain organisms such as the firefly and the glow-worm belong to this class of bodies.

When light is produced in a chemical change at a low temperature we have a phenomenon known as chemiluminescence. Changes of this kind are due to the union of the substance with oxygen, and may therefore be also called oxy-luminescence. The glowing of phosphorus is an excellent example of chemiluminescence, for it is slow oxidation.

Taking Unusual Picture

Film Director Plans Movie Of "Valley Of 10,000 Smokes"

The mysterious "Valley of 10,000 smokes," in the Aleutian Islands, where volcanoes blow their hot breath against Arctic winds, will be the object of an ambitious motion picture expedition, Ewing Scott, Hollywood film director, said. "Our expedition will pioneer the use of modern photographic equipment operated by trained specialists. We have four specially designed aeroplanes at our disposal, and hope to photograph scenes never before viewed by man."

More Honey Produced

Alberta bees worked overtime during the past year, it is indicated in figures of the Alberta agricultural department. In 1934, 1,264,000 pounds of honey were produced, which at 10 cents per pound brought \$126,400 to apiculturists. Last year's production was 1,000,000 pounds valued at nine cents per pound.

W. N. U. 2079

Arms And Ammunition Industry

United States Government Opposed To Governmental Ownership

The United States war department opposed governmental ownership of the arms and ammunition industry in a prepared statement submitted to the senate munitions committee, several of whose members have proposed such a course.

"Such a policy would fail in war, and therefore does not appear logical in peace," the department said, asserting nevertheless it "does not oppose in any way a programme of licensing the munitions industry."

Bernard M. Baruch, chairman of the old war industries board, told the house foreign affairs committee of the difficulty and importance of obtaining tin in time of war, and recommended that the government buy thousands of tons and store it away, "just as it would invest in a battle-ship."

It was suggested the United States accept tin in payment on war debts, and Baruch agreed.

Queer Home-Made Clock

Has Celebrated Twentieth Birthday And Keeps Good Time

What must be the most elaborate home-made clock in the world has just celebrated its 20th "birthday" in the home of G. W. Baritrop of Newtown, New Zealand.

He completed it after 30 years' work and set it going in 1914. It has kept accurate time ever since.

He made it out of all sorts of odds and ends; bits of old clocks, old tins, bicycle bells, fishing line, an empty can of floor polish filled with lead (as a pendulum bob), strands of wire and scraps of junk.

It tells the minutes, hours, days of the month, state of the moon and the corresponding times of all the chief cities in the world. Mr. Baritrop had never made a clock before—and has never made one since.

FASHION FANCIES

773 SMARTLY TIED NECKLINE TUNIC DRESS—UPPER SLEEVES CUT IN ONE WITH SHOULDER YOKE—EASILY SEWN!

By Ellen Worth

Here's an ideal tunic dress that will answer so many daytime requirements for you admirably.

It has a most pleasing new tied neckline. And don't you think the sleeves attractive in deep shaped cuff effect?

You may have your way about materials for this charming dress that you'll find so extremely simple to make.

Pebble crepe silk is very fashionable in black, rust, bright blue, red or green and is lovely for this model. It also looks stunning carried out in satin-back crepe, velvet, wool crepe, etc.

Style No. 773 is designed for sizes 14, 16, 18 years, 36, 38 and 40 inches bust. Size 16 requires 4 1/2 yards of 39-inch material with 1 1/4 yards of 35-inch lining for skirt.

Patterns 20c each. Address mail orders to: Pattern Department, Winnipeg Newspaper Union, 175 McDermot Ave. E., Winnipeg.

Enclose 20c extra if you wish a copy of our Fall and Winter Fashion Magazine. Pattern and magazines are mailed post paid.

"How to Make Better Dresses" booklet, a helpful guide to sewing, is obtainable for 20c. Whether you are a beginner or quite adept with the needle, we think it would pay you to obtain a copy.

WILLY WILLY THE TRAMP: "You don't mind me eatin' the snow off yer doorstep, ma'am?"

LADY OF THE HOUSE: "Not at all. Do you think you could manage to eat a path to the gate?"

—The Humorist, London.

A Worth-While Bequest

Trust Fund Brings Christmas Cheer To Aged Peoples' Home

"I, being mindful that while there are many to remember the child on Christmas Day, there are few who think of the aged and forgotten . . ."

Such words were written into her will, before her death 2 1/2 years ago, by Mrs. Caroline McGilvra Burke, pioneer Seattle resident. She provided that \$25,000 be put into a Christmas trust fund for residents of the Kenney home for old folks.

In 1934 the terms of the will were carried out for the first time. The 56 residents of the home celebrated at a dinner. Each received a cheque for \$43.

Comprehensive variety tests conducted at the various Experimental Farms and Stations of the Dominion Department of Agriculture throughout Canada, as well as the tests undertaken by the Cereal Division at the Central Experimental Farm at Ottawa, indicate the varieties of grain which may be regarded as the most reliable for general cultivation, district by district, at the present time.

Surf water foam is more dangerous to swimmers than is the swirling motion of the waves; every bubble lessens the density of the water.

Taking Lessons In Seeing

Women Blind For Years Have Mistaken Ideas About Things

After years of blindness two women have left London eye hospitals, seeing through the eyes of other women—thanks to operations by a brilliant Welsh surgeon. They found that they had to "learn to see". They helped each other. Now they have parted.

One, Mrs. Daphne Muir, wife of Dr. Raydon Muir of Cape Town, has gone to the United States. The other is left in her English home.

They were operated on by Dr. Tudor Thomas of Cardiff. Mrs. Muir had not seen for ten years; her fellow-sufferer for 30 years.

When a woman has not seen since she was a child she discovers what mistaken ideas blind person have about the world around them. Her first lessons in seeing take the form of drawings on a blackboard; ships and houses, dogs and cats, flowers and faces are drawn for her. She learns to know what they are.

Next she is asked to fill the details; to put funnels on to a ship or flowers on stems. Then she learns to distinguish the faces of those who come to see her and to see things in focus as a whole.

A man can walk a mile without moving more than a couple of feet.

The SNAPSHOT GUILD

ENLARGEMENTS AS GIFTS

Enlargements make just about perfect gifts for any occasion. Here are two different enlargements from the same snapshot negative; one for Dad's desk at the office and the other for the living room out at Grandma's.

Everything considered, snapshotters are a lucky lot. As we have seen, they have the edge on ordinary mortals in the matter of really personal, meaningful Christmas cards. And snapshotters are lucky in that they have the means of creating gifts of exceptional charm and value for any occasion.

These particular "means" are the snapshot negatives from which beautiful enlargements can be made. If you haven't yet experimented with enlargements, now's the time. If you have a darkroom of your own, where you develop and print your own pictures, one of the simple modern enlargers will make it a vastly more fascinating place. But you get practically the same pleasure—and ultimately excellent work-out of enlargements made from your films by any regular photo finisher.

In enlarging a picture you get not only a bigger, more realistic image but the opportunity to select the best part of any negative for magnification. Suppose you have a good negative of the youngsters at play in the sandbox—a picture which their grandparents would be delighted to have, enlarged, as a gift. But suppose there's something incongruous—a wash on the line, a lawn mower or anything else that doesn't add a thing to the charm of the view—to the right or left of the children. With an enlargement, that distracting, unnecessary feature can be completely eliminated.

There's nothing complicated or difficult about enlarging. It's exactly

like a "magic lantern" or stereopticon. The only difference is that you use a negative film instead of a lantern slide and project the image on light-sensitive paper instead of a silver screen. By masking out the undesired parts of the negative you keep them from reaching the paper. Any photo shop will explain this and other details more fully for you.

Enlargements may be of almost any size. Any good negative, no matter how small may be "blown up" to make a picture five or six times the size of the original. A sharp 2 1/4 x 3 1/4 inch film will easily give you a sparkling 8 x 10 inch enlargement. But that is by no means the limit. Enlargements have been made to cover an entire wall of a room. But such jobs are not recommended for folks such as ourselves. (Not unless you're wealthy!)

A word about subjects for enlargements—particularly if they're to be used as gifts. Choose pictures that will mean something to the recipients. A shot of Fido trying to climb a tree after Cleo, the cat, will be vastly appreciated by big brother or sister away at college, but it won't mean very much to Aunt Cynthia who doesn't care for either dogs or cats.

Some of the best enlargements we've seen have been landscapes—or seascapes. Mountains usually make good pictures. But if they're to be given as remembrances, choose landscapes familiar to those who will get the pictures.

JOHN VAN GUILDER.

Finders Were Not Keepers

Rag Picker Peeved Because Lady Wanted Her Hat

As austere a lady as you could imagine was going along First Avenue on one of those recent windy days when an atmospheric paroxysm tore her hat right off her head. It must have had the elements of streamlining, for it made a rather noteworthy flight, gaining an altitude of probably fifty feet and covering almost a block in distance. It made a good landing across First Avenue near Fifty-second Street. The lady had been able to keep it in sight, but her pursuit was slow because of the traffic lights, and by the time she had caught up, a ragpicker, or at any rate an old man with a bag who had been investigating trash cans, had the hat and was pulling the feathers off, preparatory, apparently, to stuffing it in his pack. He gave the hat up, but with a sullen air of having been cheated.—The New Yorker.

Just Want Civil Rights

Quebec Woman Explains Why They Are Seeking Vote

Much-needed reforms, not revolution, were the aims of Quebec feminists, expressed by Mrs. Pierre Casgrain, president of the League for Women's Rights, to the public speaking section of the Junior Board of Trade at Montreal.

Mrs. Casgrain explained that women wanted the vote because they were aware it was the surest and most expeditious way to obtain the recognition of their civil rights. She derided the idea that women who took an interest in matters of public concern became unmindful of their domestic obligations. Admitting that suffragettes might have "a little less glamor than social butterflies," she still thought they were just as good mothers and wives.

Recipes For This Week

(By Betty Barclay)

COCONUT FRUIT PIE

- 1/2 cup sugar
- 6 tablespoons flour
- 1/4 teaspoon salt
- 1 egg yolk, slightly beaten
- 1 cup water
- 1 cup canned pineapple juice
- 1 tablespoon butter
- 1 tablespoon lemon juice
- 2 cups shredded coconut
- 1 baked 9-inch pie shell
- 4 slices canned pineapple, cut in pieces.

Combine sugar, flour and salt in top of double boiler; add egg yolk; then add water and pineapple juice gradually, mixing thoroughly. Place over rapidly boiling water and cook 10 minutes, stirring constantly. Remove from boiling water; cool and add butter, lemon juice and 1 cup coconut. Chill. Turn into pie shell. Sprinkle with remaining coconut. Arrange pineapple pieces on top.

ENGLISH RAREBIT

- 1 cup stale bread crumbs
 - 2 cups milk
 - 2 tablespoons butter
 - Few grains cayenne
 - 1/2 cup soft mild cheese cut in small pieces
 - 1 egg
 - 1/2 teaspoon salt
 - 1 teaspoonful Worcester sauce
- Soak bread crumbs in milk. Melt butter, add crumbs and cheese. When cheese is melted, add egg slightly beaten and seasonings. Cook three minutes, and pour over fried tomatoes or toasted crackers. Serves six.

Could Take Them Himself

Magistrate Asked For Suicide's Fingerprints And Guard Sent Fingers

A carefully wrapped parcel containing eight fingers and two thumbs, neatly packed and labelled, reached a surprised magistrate at Bruges, Belgium.

It had been sent in response to a request directed to a communal guard at Vilseghen to send the fingerprints of a person who had committed suicide by drowning.

The guard, unfamiliar with modern identification methods, resorted to amputation for the necessary information.

Prince Edward Island is the only province in Canada showing a reduced value in field crops for 1934 compared with 1933. The estimated value for 1934 is \$8,000,000 dollars, and \$8,841,000 dollars in 1933.

The ancient Egyptians believed themselves to be an indigenous people, free from all foreign admixture, and all the known facts tend to favor their contention.

Serum Declared Success

Announcement By Denver Tuberculosis Experts To Be Made

The announcement of the success of a tuberculosis preventive, apparently as simple to administer as small-pox vaccine, is expected to be made soon by Denver tuberculosis experts.

Governor E. C. Johnson disclosed that "human guinea pig" experiments with Colorado convicts, during which the tuberculosis serum was tested, seemingly are a success.

In medical circles there were reports the formal announcement of the results will be made public soon.

Doctors of the National Jewish hospital at Denver, who developed the serum during experiments which took 15 years, adhered to their policy of silence but they indicated to officials at the Colorado prison, where tests were made, that they have no doubt of the success of the preventive.

Two convicts, who gambled their lives in the tests against a chance at freedom, probably will be granted pardons early in January, Governor Johnson said.

These men, Carl Erickson and Mike Schmidt, were first given "shots" of the serum last April. Then millions of tuberculosis bacilli were injected in their blood.

Prison officials said both men are in good health and that they had shown no signs of contracting the disease.

Denver tuberculosis experts said that the injections of the bacilli were sufficient to "impair the health of any ordinary person" and that if the two convicts had not contracted tuberculosis by this time the serum could be considered a success.

Governor Johnson said that in his agreement with the convicts who volunteered for the tests, it was provided the men should gain their freedom when the physicians had completed their experiments.

Canadian Wheat Pools

Able To Present Statement Showing Substantial Progress

At its recent annual meeting held in Regina the Saskatchewan Wheat Pool was able to present a statement showing substantial progress, notwithstanding poor crops in a considerable area of that province. Total grain handled by the Pool during the year was slightly over 60,000,000 bushels and working capital increased from \$3,390,854 in the previous year to \$6,017,831.

In 1929 the Wheat Pools of the western provinces paid their members some \$22,000,000 more than the grain brought when finally sold. Financing under the conditions arising from this over payment, which were due to the sudden drop in grain prices in the 1929 crop year, was made possible by support extended by the provincial governments. The pools are now repaying the government advances, with the exception of approximately \$1,300,000 which was written off by the government of Manitoba. The first payment of principal came due in the fall of 1933 and payment of principal and interest was made by the three pool organizations. Principal and interest have again been paid in 1934, the amount so paid by the various pools being: Manitoba, \$233,741; Saskatchewan, \$1,132,304; Alberta, \$453,425; total, \$1,819,470.

As Good As Money

Circus Manager Had To Take Codfish For Tickets

The manager of a circus showing in Sweden was forced to accept codfish instead of money in return for entrance tickets. At one village, when he had put up his tents, he learned that there was a shortage of ready money. He decided to allow the audience to pay in kind, and the box-office accepted codfish for tickets. The only difficulty arose when one of the audience arrived with a seal and asked for change. The manager sold his "takings" to a wholesale market.

The number of hogs graded in Canada during the 50 weeks of 1934 ended December 13, was 2,870,041, compared with 3,049,526 during the corresponding period of 1933.

The recent British Trans-Greenland expedition travelled 1,500 miles by dog sledge, 700 of it over Greenland territory never before traversed by man.

There are upward of 100 different commercial explosives in common use.

Every person in Stockholm, Sweden, spent an average of \$10 for movie tickets in the last year.

AT 62—IN BED WITH RHEUMATISM

At 65—Working Again

Why worry about rheumatism? This old fellow had it almost as bad as it could be. But he just found the right remedy, stuck to it, and now he's working again—at 65 years of age.

Let him tell you all about it:—"For two years and a half," he writes, "I have suffered from rheumatism. For eighteen months I could not turn over in bed, nor help myself in any way. My legs and feet were swollen, and I could not sleep or get any rest until I started taking Kruschen Salts. After taking one bottle, I went about on two canes. I kept on taking it, as I found the pains were leaving me. I have taken six bottles, and now I have started working again. I am 65 years of age, and everybody that knows me says I am a wonder to get on, after what I was."—J. E.

Do you realise what causes rheumatism? Nothing but sharp-edged uric acid crystals which form as the result of sluggish eliminating organs. Kruschen Salts can always be counted upon to clear those painful crystals from the system.

THE TENDERFOOT

By

GEORGE B. RODNEY

Author of "The Coronado Trail", "The Canyon Trail", Etc.

CHAPTER VII.—Continued

"Aye. I struck a regular Easter gremlin." The whole damned ranch was layin' for me! I reckon this time that man Dustin isn't under any false impressions where we stand. Who's this?"

The slatted door to the barroom was nearly torn from its hinges as Hoskins, the telegraph operator, flung into the bar.

"I'm lookin' for one Duro Stone," he shouted. "Oh! Here you are! I got an answer to your telegram, Stone. That wire you sent to Gerald Keene, I'll send a copy to you later. This man Keene wired an answer. He says: he'll be with you the tenth of next month."

"Fine!" Stone elbowed a man aside and headed for the street and the crowd sucked back from him. The man who could best Sam Dustin, Corse and the pay roll of the Broken Spur was not to be held lightly. With Dustin and Corse his avowed enemies, he was a marked man in Seco. With Frank Crewe at his side he snatched his pony from the tie-rack, they swung into saddle and headed down the street.

Once on the open trail, Crewe demanded and got an explanation. As Stone told him the details the old manager's face stiffened and grew serious.

"There a lot behind this that we don't sabb," he said. "I'm glad this man Keene is comin'."

Neither of them knew that that message flung abroad in the bar of the Silver Dollar set fire to Dustin. The moment he realized what Hoskins had said he whirled Corse aside and started for the door.

"We'll get back to the Broken Spur as quick as we can," he said. "I've got business to attend to."

CHATER VIII.

The word of that telegram galvanized Sam Dustin into instant life. Once back at the ranch-house at the Broken Spur he hustled Spike Goddard into the office for conference.

"We've got to change our plans a bit," he said. "While I was in the Silver Dollar that man Stone from the Hour-glass came in with Crewe, their foreman. Corse was with me."

"Corse? That damned fool..." Spike burst into a great laugh. "Do you know what happened to Corse and Gray? A whole lot more than you know of must have taken place. Old man Kane saw the two, Gray and Corse at work on Red Water. Well... the other day..." And Spike proceeded to give a garbled account that he had got from the negro driver on the wagon. He had not seen a great deal but he had seen the two men lashing each other with the mesquite sticks and the sight set him to talking... after he came back to the Broken Spur.

Dustin stopped him with a pale face. "It was bad enough havin' old man Kane see what Gray and Corse were doin'," he said. "Now you tell me that this man Stone from the Hour-glass saw it too..."

"That was some time after Kane saw 'em," said Spike as though that made a difference.

"You damned fool! You know Gray

and Corse have got orders to keep as far away from the ranch as they can and to gather in all the cattle they could find. You know we gave them the wagon so they could keep far out and not implicate us. Looks to me like you've lost your mind, Spike. Hell bells, man!"

"You didn't hear me right," said Spike. "Listen to this..." And between gales of laughter Spike told Dustin anew what had taken place that day on the open range. To his astonishment Dustin did not laugh.

"Don't you think it's funny?" demanded Spike. "It's almost as funny as an ear-ache. You poor fool! Can't I make it clear to you? Don't you see that Stone knows now as much about the crooked work on the cattle as Kane did? Do you happen to know what happens to men caught with the goods for rustlin'? Good God! Can't you see a thing like this? If Carr finds out what Stone, his hired man, and old Dad Kane knows, he can haul us all into court. If he does that, their evidence will..." He shivered a little at thought of what that evidence could do. "You'll look good dancin' at the loose end of a rope."

At last Spike Goddard "saw". He stood wordless, licking his lips as he always did when perplexed.

"Well..." he said finally, "I expect maybe you're right. Mostly you are... What'll we do then..." "We'll have to fire Corse and Gray and let 'em move right on, and that'll take some money. They've got to see that if they talk we'll tell all we know. For the rest... we'll do exactly what I planned. We'll have old Dad Kane show us that location and then he'll have to disappear."

For just a moment, even while he talked, Sam Dustin knew cold fear. Every dollar that he owned in the world was invested in his fortunes at the Broken Spur. Common sense told him to sell what he owned at any cost and leave at once if he wished to save his skin... He dared not face a hazard of new fortunes with empty hands. A week ago all looked well. They were gathering in cattle from every little crooked canon too distant for the few men of the Hour-glass to range. A week ago his future held a very different outlook. No... This damned man Stone's appearance had put a spoke in his wheel. Spike must have sensed his thoughts.

"How about this man Stone?" he demanded.

"Leave Corse and Gray to tend to him," said Dustin grimly. "Our big game is what Kane found. Once we get that, we own the Hour-glass. Once we own the Hour-glass..." He licked his lips at the thought of how easily Edith would come to him to save her father. "Listen, Spike..." "To-night Hoskins, the telegraph man, came in to the Silver Dollar. You know Gerald Keene owns half the Hour-glass. He's comin' here. Hoskins ran into the Silver Dollar and told Stone that he had a wire from Gerald Keene. He'll be down here on the tenth..." That gives us just seventeen days...

"To do what?" "Good God! Haven't I been telling you? Joe Carr owns half the Hour-glass. This man Gerald Keene owns the other half. If Keene dies, old Carr owns the whole ranch. I've got notes from Carr... I bought them from men he borrowed money from in Seco and he gave his share of the Hour-glass as security. Don't you see now? If Gerald Keene dies, old Carr passes on the whole ranch to pay for his notes... See now?"

"I... I'm beginnin' to," said Spike dazedly. "We'd git the whole of the Hour-glass and the gold-mine that old man Kane found..." "And I'll get Edith," said Dustin quietly. "I'll get Edith. She'll be damned glad to marry me to keep her old man out o' the poor-house. See?"

"By God," said Spike admiringly, "if I didn't know you so well, Sam, I'd say you was crooked." Then he snickered. If there was one thing of which Spike Goddard was sure, it was that no power under Heaven could induce pretty Edith Carr to have any dealings with his partner. But it was hard to keep from laughing at thought of it. Sam was so darned sure of himself where women were concerned.

"I bet you two drinks she turns you down on any account," he said. "Shucks, man! What do you want to buy a roan heifer like her fer?"

"You fool," said Dustin. "Haven't you ever broken a horse that fought you? It didn't make any special difference about that horse. There was fifty better in the remuda but you wanted to break that one because it fought you. You just made up your mind you'd break that horse to hand or bust. Know that feelin'?"

Spike nodded soberly. He knew

exactly that feeling. Dustin went on.

"You send Peyotl Gregg in to me," he said. "I need him in this."

In ten minutes Peyotl Gregg shambled into the room. Peyotl was a fixture at the Broken Spur just as a boar used to be a fixture at the Court of Charles of Burgundy or a fool at Feudal boards. He was a huge bulk of a man, making up in thews what he lacked in brains. His low brows, his deep-set eyes that alternately gleamed and glowed cavernously, his loose-lipped mouth, all told a story that is not rare enough in the West. The man was a victim of that dread drug that has pulled down so many men... Peyotl! He was as strong as steel yet slackness was, apparent, too. It was written all over him. Dustin's great hand snatched at him and almost hurled him into a corner.

"You've been smokin' that damned dope again," he said fiercely. "I've told you a dozen times to lay off it unless you get it from me. I swear to God, Peyotl, some day I'll kill you if you don't obey my orders."

"I been mindin' 'em fer five years now," croaked Peyotl. "What you want, Mist' Dustin?"

"You get packs made up for the mornin'," said Dustin. "I'm goin' in to the hills for a few days and you're to go along. Just you and me and old man Kane. Get two pack-ponies, too... No. Better use old man Kane's burros. They're pretty slow but they pack better and they know the trail, too. Use the pack-burros. Understand?"

Peyotl nodded wordlessly and disappeared, and Dustin stared after him as he slunk out of the room. There is no other word to adequately express it: he simply faded away as a coyote merges into the shadows of the desert.

For more than five years Peyotl had been a fixture at the Broken Spur. Where he originally came from no one knew or cared. The bunk-house accepted him as it accepted lice or sand-burrs in their blankets; as something to get rid of as soon as possible. Whatever he had ever had of brains had long ago been sapped by the use of that fatal drug that he had smoked for years; even before he came to Seco. From time to time Dustin gave him a few cigarettes from a sardonic wish to see how like a man can be to a beast... And he saw! All that Peyotl knew was that he liked the stuff... The drug that the wise old Spanish conquistadores forbade to their Indian slaves because, under its influence, they would neither work nor toil. After years of its use there remained to Peyotl the gift of speech that alone, with laughter, separates man from beast. Peyotl had not laughed for many years and he spoke but seldom. When that stuff was obtainable he was useless.

Dustin watched him shamble from the room and sat back frowning. He had spent hours over the plan that he had formulated and he did not propose now to take any chances with it. To insure it, he hunted up old Dad Kane in the bunk-house and

told him to be ready to start at daylight. His argument quieted him.

"We've simply got to have that claim staked out so we can register it all right," he said. "You're right about the minin' law. The first man on a lode can follow it. Once you're on the vein even old Joe Carr can't stop you."

Spike Goddard was on hand on the porch at the first light to see them off. Even Dustin, rarely given to laughing, grinned a little as his partner heaved an old boot after them.

The uprushing sun found them at the Willow Water crossing and noon caught them at the edge of the long mesa where the true foot-hills begin. Old Kane, in the lead, was dour and silent, urging on his packed burro that kept them at a slow walk most of the day. He rode wordlessly and paid no attention to Dustin. Peyotl, busy too with the burros, paid no attention so Dustin had time for his own thoughts.

Those thoughts were not pleasant. Dustin was a curious character. Under kindlier stars he might have developed into a really fine man but Fate, that plays her hand with a hidden grin on her mouth, had dealt Sam Dustin a hand that he had to play. Undoubtedly the old Greek tragedians were right when they wrote that a man may not escape his fate. It is written and having been written no man may erase or alter it. Sam Dustin, endowed by Nature with the physical parts of a man, was handicapped by having been denied their proper use.

In spite of the casual way he told his plan to Spike Goddard, his mind was in a whirl as he rode across the sandy foot-hills below the Red Water canon. To remark casually that a man must be removed is one thing; to effect that removal is another. From time to time his eyes strayed to Peyotl for, after all, Peyotl was the key to his plan.

(To Be Continued)

Made Himself Popular

Man Pleased Children By Building Modern Doll-House

Simon S. Rabinovitz was about the most popular man with the children in Roxbury, Mass., after he had built a 12-foot doll house for his granddaughter, Dorothy Hyde, 10. Rabinovitz built the house in six months out of 110 sugar boxes and odd lumber that was about his cellar. It is complete with electric lights, hardwood floors, a bed for Dorothy's baby dolls, a roll-top desk, toy telephone, broom, rocking chair, waste basket and a china closet with toy dishes. The house was built at a cost of \$40.

Struck It Rich

Mrs. Charles Palm, a widow with nine children, "struck it rich" on her dry-land farm near Saco, Montana. Geologists seeking sand and gravel to be used in the construction of the gigantic Fort Peck dam, found 1,000,000 cubic yards of it on the Palm homestead, the only available source of supply. Gravel contracts will bring her \$100,000 during the next five years.

THE ROYAL COUPLE HONEYMOONING AT HIMLEY

Our photograph, taken at Himley Hall in Staffordshire, shows the happy royal couple, the Duke and Duchess of Kent, sitting on a stone wall while enjoying a quiet honeymoon. Note the attitude of the faithful police dog, who apparently intends to keep away all intruders.

Your Refrigerator Needs Help

Even in refrigerators foods often lose their original flavor, moisture, or crispness. Complete protection of both flavor and freshness is easily secured by wrapping food in Para-Sani waxed paper. Just tear off what you need against the sharp edge of the box.

For less exacting uses "Centre Pull" Waxed Paper in envelopes is very popular.

Both kinds are sold by grocers, druggists and stationers.

This Canada Of Ours

Importance Of Dominion Out Of All Proportion To Its Numerical Strength

The men who pioneered this country, who laid the foundation stones for the great Canada of to-day, faced what often seemed to be insuperable difficulties. But they fought through, with the courage traditional in their several races, and they won, leaving for us, eventually, a well-planned nation capable of occupying one of the chief places among the countries of the world.

To-day we are still unimportant from a population standpoint, but the richness and variety of our resources, coupled with the vigor, the courage, the determination, the bravery of our people have lifted us to a position out of all proportion to our numerical strength.

The world has taken notice of Canada in the last two decades and we predict that the world's interest in our country will grow rapidly in the next few years as appreciation of our achievements and our natural resources becomes more general.—Border Cities Star.

THE RHYMING OPTIMIST

By Aline Michaelis

AUTUMN OF LIFE

Into your arms, O, autumn night,
I beg you, gather me,
Teach me the need of each bird's flight
And every leafless tree;
Show why the rose must suffer blight,
Why winter has to be!

O, night, I ask you to reveal
Your secrets to my mind;
There must be truths this hurt to
Heal,
Could they but be divined,
And now I strangely seem to feel
That winter may be kind.

Show my rebellious, eager heart,
So tuned to song and flowers,
How cold and silence play their part,
How sleep has, too, its dowers;
Let me forget this ache, this smart
And welcome winter hours!

U.S. Fortifications

May Establish A Naval And Inland Base In Alaska

A move to increase American fortification in the Pacific was described as virtually certain to develop in the United States congress after Japan formally scraps the Washington naval treaty.

A possible naval base and an inland air base in Alaska already are being discussed on Capitol Hill.

Anthony J. Dimand, Alaska Democratic delegate to congress, said both Alaska and the coast states, and perhaps Canada, would welcome stronger fortifications, also in Hawaii and other Pacific possessions.

Compared with 1933, the number of horses in Canada declined in 1934, Nova Scotia alone showing a slight increase.

The University of Michigan reports that rats, as well as human beings, are either right-handed or left-handed.

Little Helps For This Week

"Thou shalt worship the Lord thy God, and Him only shalt thou serve." Matthew 4:10.

The comfort of a mind at rest
From every care Thou hast not
blest;
A heart from all the world set
free,
To worship and to wait on Thee.

Resign every forbidden joy; restrain every wish that is not referred to His will; banish all eager desires and anxiety. Desire only the will of God, seek Him alone, and thou shalt find peace.

I have been a great deal happier since I have given up thinking of what is easy and pleasant, and being discontented because I cannot have my own will. Our life is determined for us, and it makes the mind very free when we give up wishing, and on'y think of bearing what is laid upon us, and doing what is given us to do.—George Eliot.

New Revelation In Science

Microbes Carried Across Atlantic By Winds Of The Upper Air

Col. Charles A. Lindbergh was revealed recently as a new pioneer in science—the first man to gather proof that microscopic bacteria, fungus spores and pollens, including some diseases, are carried all the way across the north Atlantic by winds of the upper air.

The flyer collected these tiny forms of life at many points high over northern waters during the flight he and Mrs. Lindbergh made across the north Atlantic in the summer of 1933.

The discovery by Col. Lindbergh is believed by scientists to be of great importance in showing how both disease organisms and others that are beneficial can be transported alive over long distance by air currents high above the ground barriers.

Among the organisms Col. Lindbergh collected were: Several kinds of fungi which cause rust and smut diseases of crops; others that cause early blight of potatoes and apple scab and other blights that attack crops, and several that cause decay of wood. Many others were found that have not yet been identified.

Longest Straight Railroad

On the great flat plain of Nullarbor, in Western and South Australia, about 100 miles inland from the southern coast, lies the longest straight railroad in the world. This line connecting the east and the west of the continent, runs 300 miles through grazing lands without a single curve. From Kalgoorlie to Port Augusta it stretches more than 1,000 miles without crossing a river.

An American film actress was applying for a passport. "Unmarried?" she was asked. "Occasionally," she answered.

Balboa park, San Diego, Calif., has an artificial cliff home for its mountain goats.

Not all of us first met our wives, some of us were overtaken.

STAGE SKIDS INTO DITCH
 The east-bound Pacific Stage skid-
 ded into the ditch near W. Moore's
 farm, Interprovincial highway, Sum-
 as Prairie on Saturday afternoon.
 Neither passengers nor driver sus-
 tained any injury. The windshield
 and several windows on one side of
 the vehicle were broken.

Reminiscences of
 early days on
 Sumas
 by MRS. W. H. FADDEN, pioneer
 resident of Upper Sumas.

(Continued from Last Week)

WHEN Mr. O. B. Ackerman lived here he built the Methodist church in Lower Sumas, as it was then called, the dedication ceremonies taking place in the fall of 1886. He and his wife planned to attend this opening, and invited Mrs. A. Bowman, one of my sisters, who was visiting me, and myself, to ride over with them. We travelled in a big wagon along the shore of Sumas Lake, in and out around curves, rocks big boulders—the easiest way for the horses to travel—and at the best we received a great shaking-up, but we got there, crossing the Vedder by a bridge built near the old Lumsden property (and later washed out by floods).

These were novel experiences to the city girls, the kindness and hospitality was remarkable. One was not a stranger for long, and entertainment was provided for all who came, and we became acquainted with the real old-timers, the Chadseys, Evans, Wells, McGillivray, Kippis, and many others. The old church stands today at the turn in the new highway, called "Zink's" and descendants of some of these old-timers still attend services there.

ANOTHER BEAR STORY
 As may be supposed, game was plentiful in those days, and many were the stories circulated in pioneers' homes. Here is one: a young man went up the hill not far from the house to look for deer. He saw one, shot it and ran to cut its throat. In a hollow stump, nearby, a black bear was waking into activity. The smell of the blood brought him to the scene of the "kill" snuffing. The young man took careful aim at the bear "between the eyes." Then, remembering he had fired his last shell, he did not stay to note results, but made a home-run down-hill, imagining the bear might overtake him at every step. This did not happen so he got more shells and one or two other young men and went back to reconnoitre. He found that the one shot had killed Mr. Bruin. Do you remember?

The snow-drifts of Christmas week some of which need not have bothered the traffic so much had the wild rose brush bordering parts of our roads been cut off, as one would expect in these modern times, brings to mind stories of earlier days, when drifts filled many roads, and travellers had to open fences and go through fields and make way to get through. During one such storm the wife of an old Indian (Jim York) died, and great difficulty was experienced in taking her remains to Nooksack for burial, as Whatcom road was filled with drifts.

THE DAYS OF LONG WHISKERS
 Another time, Mr. Record, who lived on what is now the Huggard-Corbett farm, had lumbering interests across the line, which took him to Whatcom occasionally. He drove a team of snappy trotters, hitched to a light buckboard usually, and evidenced his willingness to put up \$100.00 that he could drive them from here to New Westminster and back in four hours—this in the year 1890. No one took up his bet. One wintry spell our road was filled with high uneven snow-drifts, and Mr. Record started for Whatcom with his fiery steeds and a two-seated sleigh, his father-in-law in the back seat. Mr. Record wore long whiskers and he was driving so fast that the wind divided his whiskers so that they floated out on each side of his head. He failed to slacken speed as he came to a sharp turn and drift near the river bank, and while he managed to stay in the sleigh, his father-in-law could not, and the old man went rolling down the drift to the river, which, fortunately, was frozen.

GOVERNMENT AGRONOMIST TO GIVE RADIO LECTURE

Results of the recent investigation-
 al work conducted on the Experimental Farm, Agassiz, will constitute the material from which W. H. Hicks, superintendent, will form a radio address titled "Intensive Pasture Land Management" which he will deliver over CHWK and CRCV on the B. C. E. R. broadcast on Monday, January 21 commencing at 8.45 p.m.

Whatcom road and several lateral roads are again blocked with snow-drifts, blown up by Sunday's winds. The main highways are open.

Prizewinners at the military whist staged by St. Anne's choir last Friday in the Men's Club were Mr. and Mrs. M. Shore, Mrs. R. Gilmore and Mr. J. Mahoney. Owing to the heavy snowstorm that night, only eight tables were filled.

ABBOTSFORD NOT ON MAP THEN
 In April 1889 we took over the post-office, mail being carried from Mt. Lehman on horseback. Abbotsford was not then on the map, so the folks living near that vicinity came to our house at Upper Sumas for their mail—the McCrimmins, D. and Wm. Fraser, Curries, Thompsons, Vachon, Boucher, and others.

On May 13th, 1889 we visited the Fraser's, taking the trip up to see how the railroad was progressing—the Mission branch of the C. P. R. The McClure's, Matsqui, bought the 160 acres from the old man in the stump (Mr. Freeman), and this became the townsite of Abbotsford, and business becoming a townsite commenced, with Mr. Frank Munroe opening the first general store "The Pioneer."

Sumas, Wash. was also coming into existence as a small centre, my notes making mention of a trip to Wm. Sharpe's store, in January 1890, the first one there.

Legion Re-Elect Officers

"Bob" Ralston was again elected as president of the Abbotsford post of the Canadian Legion, at the annual meeting held last Thursday, in the legion quarters. Mr. J. Mawson was once again appointed as secretary.

Other officers were elected as follows: J. Rowley, first vice-president; H. Day, second vice-president. The executive committee is D. McNeill, Lieut.-Col. Cope, John Runcie, A. Tracey, F. Marshall, E. Webster, C. F. Weir, G. Gough and H. Matthews.

Serving about twenty-five residents an electric light and power line has been erected on the Peardonville-Huntingdon Rds. The Peardonville community hall is also supplied from the new line, which has been requested by residents for some time.

Notice !
 For one or two months, I will be in this district and offer expert service in—

Low Rates

"Station-to-Station"
 the cheapest class
 of long-distance telephone service
 will be extended on January 21
 to include calls to
Vancouver Island and Lower Mainland Points

THE Classified System of Long-Distance Service, which is already in effect on calls to British Columbia points east of Hope and to other parts of Canada and to the United States, will be extended to the remainder of our lines on January 21. The Classified System brings with it the advantage of station-to-station calls, which are the cheapest kind of long-distance service.

On a station-to-station call you call a particular telephone number but not a particular person, and you pay if someone answers at that telephone, no matter who it is.

You say, for example, "I want anyone at 345, Duncan."

Or, "I want anyone at the home of William Jones, Blank Street, Duncan."

Or, "I want anyone at Smith's Furniture Store, Duncan."

On station-to-station calls there will be day, evening and night rates. On person-to-person calls the rate will be the same at all hours. The minimum period for both classes of service will be three minutes.

Examples of Rates Effective January 21

Library Notes

Wells, H. G.—Experiment in
Autobiography

This lengthy and honest document provides an interesting impetus to the wave of "autobiographies" which has attacked British celebrities this past year. Besides recording his emotions and opinions through various phases of his personal career, Wells relates many an anecdote about his contemporaries in letters, with amusing pen sketches by way of illustration.

Munthe, Axel—Memories and
Vagaries

Although written many years before "San Michele" these sketches are peopled with many of the masterpiece's characters—street-sweeper, organ-grinder, and tragedian, all enveloped with this fascinating personality looked upon by his fellow man.

Lawrence, Frieda—"Not I, but
the Wind"

Lawrence's widow reveals him as she knew him, not so much through her own comment, as through his letters to her family.

Olivier, Edith—Alexander the
Corrector.

How Cruden, born in 1699, became an expert proof-reader, was several times confined for lunacy, managing each time to prove his sanity, and finally spent the remainder of his life correcting morals as well as proofs, provide vast entertainment. Abbotsford, B.C. R.E.C.

GIVING COMFORT TO THE ENEMY

Ex-Reeve Murphy of Sumas was asked by The News on Monday if he intended to stand for re-election to his former office on the Sumas municipal Council.

"Maybe I will, but most likely I won't" he stated, adding "but don't report in the paper that I'm not coming out; it will be too much of a relief to some of them to hear that."

Mr. A. McGregor's House, Yale and Ware Roads.

Ward Four
Clayburn School House, Clayburn.

Matsqui Public School, Matsqui.

of which every person is hereby required to take notice and govern himself accordingly.

Given under my hand at Mt. Lehman, B.C., this 29th day of December, 1934.

J. W. PENNINGTON,
Returning Officer

LOWER RATES FOR LONG-DISTANCE PHONE CALLS

Station-to-station calls, the cheapest class of long-distance telephone service, will become available from Abbotsford to Vancouver Island and Lower Mainland points on January 21, when the B. C. Telephone Company extends its classified system of long distance service.

At the present time the classified system, which has come into widespread use in North America, applies on calls to British Columbia points east of Hope and to points in other parts of Canada and in the United States. On January 21 the B. C. Telephone Company will extend the classified system to the remainder of its territory, thereby making the types and hours of long-distance service uniform.

Under the classified system there are four classes of service: person-to-person, station-to-station, appointment and messenger. Under the station-to-station method the calling party calls a particular telephone but not a particular party, and pays if someone answers the telephone, no matter who it is.

Day, evening and night rates will apply on station-to-station calls, while the rates for person-to-person calls will be the same at all hours.

PUDDIN' an' PIE

by JIMMY GARTHWAITE

THE LITTLE OLD-FASHIONED GIRL

THE little old-fashioned girls
Were pretty with all their curls
And ruffles and silks and laces
And pearly white hands and faces.

But then—they never could play
As little girls do today.

They never could climb up trees
("Matilda—come down from there, please!")
Or play with a ball and bat
("Maria, you mustn't do that!")
Or romp with the boys in the street
("Now, children, that isn't discreet!")

It couldn't have been any fun—
And I'm glad
That I never was one.

© by Harper & Brothers—WNU Service.

TALKING ABOUT FAVORITE MEALS

Too Many Good Combinations
to Limit Choice.

By EDITH M. BARBER

SOME ONE has asked me to write a few words concerning my favorite meal. This is really asking the impossible, because I have so many favorite food combinations. Perhaps you will like to hear, however, about one or two of the menus which I use for buffet suppers of which I am particularly fond. You see, my friends are so likely to bring along one or two extra persons, and a buffet supper can be stretched so easily. Actually, I seldom call any of the meals that I serve to my friends, dinner. When I invite them to supper they don't expect more than two courses, although they sometimes get three.

The other night, for instance, I gave them what I call toasted cheese, although it is really baked. This is an old family recipe which demands only one fork besides the dish in which it is baked for its preparation. With this I served baked tomatoes with bacon made by the easiest method.

For dessert I gave them chocolate pudding with which I have been doing some experimental work. I also provided fruit which made the centerpiece. I intended it for a substitute for those who did not like chocolate pudding, but as I had 100 per cent takers for the pudding, it provided an extra course.

Since the return of beer I have had a number of Welsh rarebit parties, the old-fashioned kind, made just with cheese, seasoning and beer. With this a potato salad may be served made savory with bits of bacon, onion, cucumber and celery. Of course, there must be hot toast, pickles, olives and other relishes. For dessert I usually serve fruit. If beer is served during one of these meals, coffee comes at the end, otherwise there should be large cups of coffee served with the main course.

Another tried and true buffet supper menu consists of veal paprika, noodles with poppy seeds and ground almonds, peas dressed with a very little cream,

ABSOLUTELY

Dorothy—Do you think that a romance which comes from a Halloween superstition can possibly result in a happy marriage?

Paul—Why, certainly, if the bride is a good cook and has a fat bank account.

25-Year Coal Fire Is Under Control

Mathewson, Colo.—The famous coal mine fire that has blazed here for 25 years is finally smoldering its last. Crews of men under direction of the United States geological survey worked 11 weeks to isolate the fire so that vast underground deposits of fuel may be utilized commercially. Hundreds of pounds of powerful explosives were used in cutting clear around the burning area and isolating it so that it will burn itself out.

son. Cook garlic in butter three minutes and remove. Add meat and sear on all sides until light brown. Add water, cover and simmer over a low fire one hour. Add cream and paprika and reheat.

Baked Tomatoes.

Cut tomatoes in halves, arrange on a baking dish, sprinkle liberally with salt, sugar and celery salt, cover with minced onion and arrange half a strip of bacon on each tomato. Bake about fifteen minutes in a hot oven, 425 degrees F., or twenty minutes in a moderate oven, 375 degrees F.

Apple-Orange Compote.

Peel, but do not core small cooking apples. Prepare a heavy syrup, using equal parts granulated sugar and water. Cook this syrup for five minutes. Put the pared apples in and simmer slowly until they are translucent. Remove from the syrup. Add two tablespoons fresh grated orange peel for each cup of syrup. Cool syrup. At serving time spoon it over the chilled apples. Garnish with whipped cream into which a small amount of iced cream cheese has been folded.

Sabon Sauce.

Grated rind and juice of half lemon
1/4 cup sherry
1/2 cups sugar
2 eggs

Mix lemon, flavoring, sugar and yolks of eggs. Stir over hot water until it thickens. Pour on whites of eggs beaten stiff.

Tartare Sauce.

1 cup mayonnaise
2 tablespoons minced parsley
2 tablespoons minced chives or onion
2 tablespoons minced capers
2 tablespoons minced olives
2 tablespoons minced cucumber
pickles
1 teaspoon tarragon vinegar

Mix the seasoning and stir into mayonnaise.

HOW IT STARTED

By JEAN NEWTON

"Better Late Than Never"
THE standby of the habitually tardy, the defense with which late-comers attempt to cover their embarrassment—"Better Late Than Never!"

How comforting it will be to those who have frequent need to announce themselves with this saying, that it is of classical origin!

For it was one of the famous "Maxims" of Publius Syrus, the Roman writer of maxims, specifically, Maxim 864, that:

"It is better to learn late than never."
What matter whether the lateness is in learning or in keeping a dinner engagement—the sentiments of the great Roman have beautifully adapted themselves to modern life!

© Bell Syndicate—WNU Service.

Nebraska Towns to Build Lewis and Clark Park

Walthill, Neb.—Representatives of ten northwestern Nebraska towns have organized a Lewis and Clark national park group to promote development of a tract including 25,000 acres north of Decatur and east of the new scenic Highway No. 73.

Iowa towns have taken an interest and pledged their support of the recreational project. A bird sanctuary is proposed for both sides of the Missouri river at the site of the park. The old mission recognized as one of the most picturesque spots in the Middle West will be included in the survey of the tract.

First in Back to the Land Movement

Ernest Jeffers was the first city dweller to sign an application for two acres of land at Pinehurst, N. J. Hundreds applied for the land to live on and to till, as part of the back-to-the-farm movement. Most of the men are on relief in New York. They will clear the land themselves and make other applications to the housing administration to build their homes.

Lights of New York

By L. L. STEVENSON

A treasure hunt within sight of the skyscrapers of Manhattan seems somewhat out of place. But one is going on right now. As a matter of fact, it is a double search, since two competing outfits are engaged in it and the chances are excellent that there will be a third entry. The newcomer in the field, if he follows his announced intention, will be none other than Simon Lake, inventor of the submarine, who recently completed an underwater craft designed primarily for locating treasures, from gold to coal, on the bottom of the sea. In fact, the "mother ship" of the new craft can suck up as much as 300 tons of coal an hour and that runs into money. It is not coal, however, that the New York treasure hunters are seeking. They are after the yellow metal that is so precious just now. The place of the search is the East river, one party, equipped with an ocean going tug, being at work at Hell Gate and the other off East 130th street. For many days now, divers have been prowling around in the mud of the river bottom. The object of their quest is the old British ship Hussar.

The Hussar went down in 1780. According to records, she struck one of the many rocky reefs in the East river and probably slid into deep water, there being a stone ledge that drops off to a depth of 80 feet. Fourteen years after the sinking, salvage operations were begun. Those of 1794 were not successful. Eighty-two years later another attempt was made. Then, the ship is said to have been actually brought to the surface of the river. But it broke in two, sank and could not be recovered again. The interest in the wreck lies in the fact that it was supposed to have been carrying gold worth at present prices about \$6,000,000, the money being the pay of British troops in this country. It is said that British admiralty records fail to show any such shipment. But treasure hunters are always hopeful and so, after 154 years, there is renewed search for the wreck.

Several old salts at Sailors Snug Harbor are watching the operations with interest and no little hope. They are in possession of maps which presumably show the location of buried treasure. They believe firmly in those maps and the only thing that keeps them from going treasure hunting is the matter of money. Sailors Snug Harbor being the port of those whose years at sea have not brought them sufficient to carry them through their old age. If the Hussar is raised and gold found, they believe that will bring such value to their maps that expeditions will be organized. Curious the light in the eyes of those old men when they talk about buried treasure. But none will show his map.

Having glimpsed those two tugs searching for the wreck of a ship of

revolutionary days, I dropped into the New York Historical society to look at those powder horns that go back to the French and Indian wars of 1755-65, the Revolution, and the War of 1812. It seems that the soldiers of those days spent much of their spare time decorating the horns in which they carried their powder. Gunsmiths and silversmiths also engraved horns for sale. A soldier would purchase one and allow his companions to make copies of it, never dreaming of course that in the years to come their pastime would become collectors' items. The most highly prized are "map horns." Nine in the French and Indian collection are engraved with maps of the Province of New York.

So proud of their powder horns were the owners that they engraved them with their names. One belonged to Phineas Bunting in 1761. Another belonged to Robert Lloyd at Oswego in 1750 and another bears the inscription: "Daniel Chapman, his horn, made at Lake George Oct. ye 19. 1758 in defense of Independence." One belonged to William Elmslie, who, in addition to a map of Northern New York, engraved on it "The front of Town House, old Meldrum in Aberdeenshire." One guess as to the land of his birth.

Times Square eavesdropping: "I'd been at the top right now if they'd only give me the proper build up."

© Bell Syndicate—WNU Service.

My Neighbor Says:

IRON doilies with the grain, to prevent warping. Be sure to iron till thoroughly dry to prevent puckering. Pieces having scalloped edges should be ironed on the wrong side, on a heavy towel or pad, till dry. This will prevent edges from drawing up.

When fruit stains are fresh, rub on salt, later pouring boiling water over and through the stain, then leaving it in the water for some time. In cold weather hang the stained article out of doors overnight. If the stain is very old, soak the article in a weak solution of oxalic acid.

If you would have your breads and rolls rise well and evenly, do not allow the baking pans to touch each other, for air must circulate around each pan for best results.

MIGHT TRY WALKING

"I wish I could find a cheap substitute for gasoline."
"Have you tried car tickets?"

New Method of Refining Oil Will Save Millions

New York.—A revolutionary way to refine oil that is expected to change the entire trend of present day refining, and save millions of dollars for motorists, was demonstrated recently before a gathering of prominent oil engineers. The method is known as the Clearosol process. This new process uses powerful solvents to "wash" oil of impurities and is regarded as the most efficient and flexible control over lubricating oil refining ever devised. It minimizes carbon forming in an automobile engine due to the oil, and eliminates gum and sludge from crude oil tar.

The demonstration was held at the Paulsboro (N. J.) plant of the Socony-Vacuum Oil company by their engineers.

Uncommon Sense

By John Blake

© Bell Syndicate—WNU Service.

Knowledge is power—but only if it is used. For unnumbered centuries the Niagara river tumbled over its two tall cliffs, and produced nothing but the sand it ground from the stone wall down which it poured.

Then the discovery of the use of electricity enabled men to put it to work.

Today it turns wheels which, miles distant, run all manner of useful machinery.

However intelligent you may be, your intelligence will be of no value to you unless you set it to work.

To make it of any benefit you must learn how to put it to work, and for what kind of work it is best fitted.

Doubtless you have met many people of whom their friends said: "These fellows are keen witted and observing. Why don't they do something beside sitting around and making 'wise cracks'?"

Probably because they are too lazy—too averse to intelligent and consecutive thinking without which there can be no real education.

Not long ago I visited a town where I lived as a young man.

There had been many young fellows with great promise among my friends. Some of them were still there, going to school.

They managed to make just about enough money to live on.

But there had been opportunities in their very town of which they might have taken advantage.

But that meant work and thought. It was easier to follow the line of the least resistance.

"Knowledge comes, but wisdom lingers," said Mr. Tennyson.

Wisdom is the fruit of knowledge. Without it nobody can get the best out of himself, or make the most of his opportunities.

Learn all you can, but don't be a pedant who is contented with knowing things.

Put that knowledge you have acquired into running some business or practicing some profession.

Make it work. Make it do something for other people as well as for yourself.

Get all you can of it. You will need it today more than ever, for there is more competition.

Don't worry if you can't go to college. But if you don't, get your own education, for you will need it.

Only rich men's sons can get along without hard work, and many of these have discovered that there is more fun to be had in doing something useful than just loafing.

Today there is as much acreage in the world as there ever has been.

There is just as much intelligence, perhaps more. The rivers still flow full banked, the rains descend to supply them.

At the present time nobody dreams that the supply of oil and coal on which modern industry depends will give out.

Who then was responsible for the lean years out of which we are now happily passing?

Some of them were too thoughtful, some of them were too greedy. Some of them were a little worse than greedy, and gathered in increment which did not belong to them.

The point is that we are living in the same world that we always had lived in, and that, as far as we can find out, this world is going to endure for a great many more centuries.

Well, what to do about it?

Make it teach us something. Men learn by their mistakes, and enough mistakes were made in the last six or seven years to supply a college with curricula for the next generation.

Do a little thinking about people who got bumped.

Take Jones, Brown and Robinson, for example.

Jones got a promotion in the firm for which he was working, and figuring that he would be sure to get another before long, moved out of a six-room house and into a twelve-room house.

Now he is trying to borrow money to keep it heated till the mortgage is foreclosed.

Brown was persuaded to take a partnership in a business about which he knew nothing. It was a promising business. But it never fulfilled its promise.

Robinson became convinced that the rise in the market was going to continue forever; like the rivers in their valleys.

It didn't. Robinson wishes he could get the old job back. Let's hope he will. Times are improving, and maybe, with his new stock of knowledge he will be able to hang on to a good part of what he makes.

An old Forty-niner for whom I once worked in the neighborhood of a California town which was left flat after the breaking up of the gold rush, said to me one day:

"Young fellow, you can drink whisky, if ye're keeful, you can chew tobacco without hurtin' yu none, you can even smoke them cigarets, but if you want to git anywhere, you gotta leave gamblin' alone."

There is a piece of advice, which had it been generally followed would have saved people a heap of money.

Britain Launches Another Huge Submarine

Great Britain launched another of its great new type submarines at Chatham recently. Here H. M. Submarine Snapper is seen sliding down the ways, after being christened by Lady Tweedle, wife of Vice Admiral Sir Hugh J. Tweedle of the British navy.

PREMIER BENNETT'S BROADCAST

Daily newspaper comment upon Premier Bennett's recent radio utterances reveal hopes that he is sincere, but a certain degree of scepticism. The weeklies, which are usually freely outspoken upon such matters, are reserving comment on this occasion. With one nearby exception. The Richmond Review uncovers Liberal-C.C.F. leanings with this caustic comment:

"Being in poetical mood this a.m. we are moved to write dear Dick a sonnet. Here it is:

"Dear Richard—your wooing is pretty.
 Inspiring this spontaneous ditty.
 But I fear you won't score,
 For we know you of yore,
 And to waste all those words is a pity!"

Well, now we know his real nasty not to be taking Dick more seriously. He has been spending a lot of money—whose we don't know—hitching up a network that would bring his voice to every fireside in Canada, and he has been turning loose a flood of oratory such as only he is capable of in an effort to tell us that he has made a great discovery.

Canada, he informs us, has something wrong with it. Canada is in something of a crisis, he states. Canada, indeed, needs saving. It really has many things the matter with it. There is a great deal of unemployment.

He's Death On Crows

As a vermin-destroyer Game Warden Frank Urquhart of the Port Coquitlam district is doing much to preserve the feathered game of his locality. In 1933 he killed a total of 1223 crows, taking 96 in traps and shooting the remainder while on patrol. His 1934 total is expected to be higher. He also bagged 58 marauding cats, three hawks, two owls, four dogs and one coyote. Urquhart has made an especial study of crows, and his report to the department, based upon actual observation, infers that this black pest is one of the worst killers of young game birds.

An enjoyable time was had by all present at the dance in Gifford hall last Friday evening put on by the Highland United football club. The attendance was not so good, owing to the inclement weather.

Mr. C. Watson of Poplar announces this week, the commencement of a competent plastering and bricklaying service in this district. Mr. Watson has had a lifetime of experience in all branches of his work.

NORTHERN B. C. FARMERS BENEFIT BY TIMOTHY RISE

Mr. A. Berner of Telwika, formerly a resident of Gifford, made calls upon friends in the Valley this week, prior to returning to northern British Columbia, where he is Soldier Settlement Board supervisor.

The sharp advance in the price of timothy seed greatly aided northern farmers this year, Mr. Berner stated. Where the price has averaged six cents a pound in recent years, this fall the price rose to 16 cents. Nine carloads were shipped east from a 100-mile area along the C.N.R. railway adjacent to Burns Lake. "Estimate the value of that shipment on an average to 25 to 30 tons to a carload," he observed. Agricultural conditions in northern B.C. areas, Mr. Berner appraises as "average."

ment.

"I hold that there is an inequality in the distribution of income," states Mr. Bennett in the light of his great discovery.

"I doubt that the present disequilibrium can continue without disaster," he says again; and—

"We must take the position that unemployment is not right."

Well, now. Isn't it nice that Mr. Bennett has discovered these things, even if it has taken him five long years to do it. Isn't it nice that he should want the people to know these great truths which he has just uncovered!

Some think he has had a great change of heart. We cannot see it. In proof of his insincerity, compare Speech No. 1 with Speech No. 2. The first was really radical—if you did, n't read between the lines. Listening, one would imagine that some healer had got Mr. R. B. in a private corner and had said—

"Now look here, Dick. You and I want to hang onto this little job for another five years. It's real cozy there, at Ottawa, and no use us having to get out and work until we have to. But I'm telling you—you've got to give the people a different line to what you've been handing them. They are all howling for a change. They all know darn well there will never be any luck for them until they have a new deal, and they are given a chance against the money barons of this piece of territory.

"If you want to save your hide, and mine, Dick, you'll give them a different line. You tell 'em you're going to mop up the country and hang all the rascals that have been living off the toil of the workers and that at last the people of Canada have found a real friend. You tell 'em all that Dick and everything else that you can think of—no one can do it better than you—and we'll be back here doing business at the old stand on the plush cushions for another five seasons.".....

And Mr. Bennett, for once listening to advice, had forthwith turned loose the mighty power of his persuasive voice and his boundless and incomparable vocabulary to inform the people that the system had really crashed, that big business was rotten to the core, just as Harry Stevens said (although Harry, forsooth, is given no word of credit for the discovery and still remains fired for having broadcast just these findings).

Canada was quite taken aback by all this coming from its Conservative Premier. But on the second speech, already there was a note of retraction.

It is alleged, and whispered, and reported that certain of his cabinet colleagues did not like that first speech; that they took R. B. to task for it and told him he was an old fool for announcing he was going to tamper with big business. So next morning contained these modifications:

"We can but move forward carefully. We must not try anything new until we are satisfied that the meas. use is wise on."

In other words, "we are going to make even more glorious promises than we did in 1930, but we are going to be very careful not to do anything about it."

He is going to talk again tonight, Monday, after which we will probably want to write another chapter.

But anyone who is going to be fooled by this golden voice of Mr. R. B. and his prattling promises, had better take a look at himself in the mirror and see if his head is screwed on quite straight."

USE OF CATAPULTS A CRIMINAL OFFENSE

"Girls and boys have been hurt, dogs and cats wounded, pigeons and other birds killed and glass broken by the use of catapults," says the Burnaby Advertiser. "Usually anyone discharging firearms can be traced through the report made. A party can use a catapult, knock the eye out of a person or do other injury, and it is impossible to get the criminal because he can place the catapult in his pocket, and no one is any the wiser. The large ones, which are made with the wooden crotch and the heavy elastic, and shoot steel ball-bearings or bullets are very powerful. The small ones that are sold are also dangerous among children, and the sale of them should be stopped.

The use of catapults is prohibited by law, and anyone found in possession of one is liable to a fine of \$50.00."

The One Family Spirit

Listening, in the early hours of Christmas morning, to the Empire-wide broadcast, which was climaxed by King George's personally voiced message to all his subjects everywhere, one could not fail to be again impressed with the marvel of radio, and to realize how it has shattered the handicap of distance, and made the most remote portions of the globe the near neighbors of equally remote parts thousands of miles away. The greatest natural barriers of oceans, ranges of mountains, whole continents, tropic heat and arctic cold, all are surmounted in a split second of time.

In a space of less than five minutes Christmas bells were heard ringing in Canada, India, New Zealand and England, to be followed by the voices of hardy fishermen on the Atlantic coast of Canada and the island of Tasmania, of lumbermen in the northern wilds of Quebec, of tea planters in Ceylon and wheat growers in other parts of the Empire, of Indian soldiers on guard in the Khyber Pass, or a guard on the great bridge at Sydney, New South Wales, while intermingled came cheers from 10,000 throats at a hockey match in Toronto, the clamor of 8,000 natives in the heart of Africa, the shrill cries of excitement of a children's skating party in Winnipeg, or the sweet voices of a choir somewhere in rural England.

Not from populous centres alone, but from isolated posts where men and women of Britain and of British Dominions and colonies are daily "carrying on" their many and various tasks, came Christmas greetings, the one to the other, and a brief glimpse of how each and all are keeping alive and observing the spirit and traditions of Christmas. It was an interesting and inspiring hour.

But it is to the personal message of His Majesty to which attention may well be directed in these early days of the new year of 1935. Referring to the fact that Christmas day, with its hallowed memories, is the festival of a family, the King, with that vision and practical statesmanship which has characterized him throughout his reign of almost a quarter of a century, said: "I would like to think that you who are listening to me now, in whatever part of the world you may be, and all the peoples of this realm and empire, are bound to me and to one another, by the spirit of one great family." And then His Majesty added these significant words: "My desire and hope is that the same spirit may become ever stronger in its hold and wider in its range. The world is still restless and troubled. The clouds are lifting but we have still our own anxieties to meet. I am convinced that if we meet them in the spirit of one family we shall overcome them, for then private and party interests will be controlled by care for the whole community."

All Christendom hails Christmas as their own, their most sacred day. On this one day at least all men and women realize in greater or less degree that they are all members of one great family. They may live in different climes, speak different languages, even worship at different altars, with varying forms of religious observance,—but as members of one great human family they observe the world's greatest festival in commemoration of the most momentous event in the history of the world.

And King George, with unerring insight, sees and tells the whole world of mankind that if they will but face their anxieties and their difficulties, not as people of alien races and differing nationalities, but as members of one family, and in the spirit which the family relationship brings, then they can and will overcome all difficulties no matter what they may be.

It is the spirit of the one family that alone will ultimately usher in that peace on earth, goodwill toward men which is the very essence of the spirit of Christmas. It is the spirit of the one family which will solve our financial and economic and social problems and troubles, because the family spirit is incompatible with personal selfishness, private greed, and corporatism, community or national oppression.

May the spirit of the one family be the impelling motive directing the lives, not only of the peoples of the British Commonwealth of Nations, but of all nations, to a far greater extent than ever before during this new year of grace.

Barley Prices High

End Of Prohibition In United States Results In Demand For This Grain

End of prohibition in the United States has brought a measure of prosperity to some Manitoba farmers and to many in northern areas of Saskatchewan and Alberta, and resulted in a paradox previously almost unknown in the grain trade. Barley to-day is worth more than Canada's finest wheat.

Two years ago barley was cheaper than fuel.

The picture has changed. Barley prices have risen and farmers are relying upon it more than upon wheat to pull them out of the depression. Thirsty Americans have created a demand for barley and Canada in the five months of the current crop season has exported more than in the entire crop year of 1932-33.

On December 22, 1932, the best feed barley, 3 C.W., brought only 13 cents per bushel, net, to the farmer, based on an average freight rate of 10 cents per bushel.

Feed barley sold at the end of the year at 41½ cents a bushel and the malting variety at 61 cents. The price of No. 1 northern wheat, second only to No. 1 hard wheat in quality, was 58½ cents, based on the average freight rate of wheat of 13.2 cents per bushel.

Cattle sales at stockyards during the present year are 15 per cent. in excess of sales during 1933, and, says the Livestock Market Report, the surplus reflects the large number of cattle on farms which have been due to increase in production and accumulation from the previous year.

The grand championship carload of sheep at the Chicago exhibition shown by Mr. C. J. Brodie of Stouffville, Ont., was sold at \$18.50 per cwt. the highest price since 1930.

FROM GIRL TO WOMAN

Mrs. N. Varney, 47, Woodstock, Ont., said: "When I was a girl, I suffered from terrible pain in my back and legs. I would have to stay in bed for several days. All this misery was soon corrected after taking Dr. Pierce's Favorite Prescription."

All druggists. New size, tablets 50 cts., liquid \$1.00. Large size, \$1.35. Write Dr. Pierce's Clinic, Buffalo, N.Y., for free medical advice.

W. N. U. 2079

Escapes Taxation

Father Of The Dionne Quintuplets Has Many Exemptions

When Oliva Dionne of Callander, Ont.—the forgotten man of quintuplet fame—makes out his income tax papers next year, he will be able to add \$2,000 to his exemptions list. Each of his five little daughters is worth \$400 as an exemption under the federal income tax. However, it is improbable that Dionne will be bothered by income tax because his wife and 10 children bring him exemptions to \$6,000 and that is more than his farm produces in many years.

"I don't think Dionne will come under my department until those children go on exhibition," an income tax official said recently. "And then, the income probably will go to the children themselves under a trust agreement and I would tax them, not the parents."

University Scholarships

Another Coach Model-Building Competition For Next Year

Two four-year university scholarships valued at \$5,000 each, have been announced for the 1935 Guild competition by R. S. McLaughlin, president, Fisher Body Craftsman's Guild, Canadian section.

This Dominion-wide Napoleonic coach model-building competition, sponsored by General Motors of Canada, Limited, enters its fourth year with the addition of cash awards to craftsmen in three districts amounting to \$1,200.

Midnight, July 31, 1935, will be the closing date, at which time all coaches entered for competition must be shipped to one central judging point. This final date gives all entrants a month free from school in which to finish, check and re-check their 1935 coaches.

Boy, showing his friend over the house—See that picture there? It's hand-painted.

His friend—Well, what about it? So's our chicken-house.

When evaporated, one ton of water from the Red Sea yields 187 pounds of salt; the same volume of water from the Atlantic ocean yields only 81 pounds.

In an attempt to stop an intruder, a householder threw a large dictionary at him, but without effect. Words failed him.

Trans-Canada Air Derby

Race In Spring From Halifax To Vancouver Suggested

An international air race across Canada with a real pot of gold at the rainbow's end for the winner is proposed by William Templeton, manager of the Vancouver air port.

With a view to drawing attention to the future of aviation in Canada and stimulating interest in a trans-Canada air mail service, Templeton proposed the air derby across the Dominion with the prize a pot brimming with the precious yellow metal mined from the gold fields of British Columbia. A pot of silver would wait the airman finishing second.

The flyer would start from Halifax and follow the route already mapped out for a trans-Canada air mail service. Over the populous industrial and farm districts of Eastern Canada and the rolling wheat fields of the prairies, the airman would wing their way to the foothills of the Rockies. Then they would fly over the towering snow-capped peaks and yawning chasms with their treacherous downdrafts below, to Vancouver, Canada's gateway to the Pacific and the terminus of the race.

Qualified flyers of proven ability would be eligible to compete in the race, thus making it an international classic and possibly attracting some of the greatest names in aviation on the continent.

Aero clubs and aviation men throughout Canada have been canvassed on the proposal, Templeton said, and have enthusiastically agreed it would provide a great impetus to aviation in Canada.

Definite action on the project is expected next spring, the Vancouver air port official concluded. The size of the pot of gold and pot of silver would be matters for discussion.

Silver Dollars For Canada

Will Be Minted To Commemorate King's Accession To Throne

Canada's first silver dollar will be minted and circulated as a commemorative token of the 25th anniversary of King George's accession to the throne on May 6, 1935. It will be called the "George Dollar" and will bear a likeness of His Majesty. The extent of its popularity will determine the amount of currency to be issued in this form but it is understood the first minting will run to at least 100,000.

Only slightly larger in circumference than the 50-cent piece the new coin will be thicker, and, in the opinion of the experts who designed it, fully acceptable from the point of view of convenience of handling, as the smaller coin.

The "George Dollar" will be circulated during the silver jubilee proceedings in London.

She: "Did the doctor do anything to hasten your recovery?" He: "Yes, he told me he would charge \$3 for every treatment."

The pursuit of happiness should never be undertaken in a pair of tight shoes.

There are 500 species of animals in India.

Powerful Lighthouses

World's Largest Guard Approaches To San Francisco And Hawaii

Uncle Sam now has the most powerful of all lighthouses located on the Pacific, guarding the approaches to Hawaii and San Francisco.

Harold D. King, deputy commissioner of lighthouses, who lately returned from an inspection of the Hawaii Territory district, described the tremendous new Makapuu Point light. This station houses the largest marine beacon lens in the world. It is on the Oahu coast, 16 miles east of Honolulu.

This hyper-radiant type is 13 feet tall and has an internal diameter of nine feet. It is composed of 1,140 prisms of hand-cut glass, highly polished, and cost the government a small fortune. It is the only one of its kind among the entire 7,600 lights maintained for navigators by the U.S.

Makapuu gives a vast flood of illumination, but is not so piercing as some other United States beacons. It now serves navigators of the big trans-Pacific liners, the Pacific battle fleet of the navy, and coastwise craft in Hawaiian waters, and also operates a radio beacon for aeroplanes. It will be an important factor in the new transoceanic commercial flying services which will link the United States mainland with Hawaii Territory and the far east for passengers, mail and express in 1935.

It was demonstrated to Mr. King that a vessel approaching Hawaii by day or night may now obtain a bearing on the Makapuu radio power.

More powerful, however, is the latest type of modern light which stabs the horizon line with a flashing signal of 1,700,000 candlepower, and by comparison with the Kilauea Point beacon on Kauai can establish both accurate direction and distance. The latter is one of the strongest lights in the Pacific, of 1,200,000 candlepower from Cape Kumukahi, on the Island of Hawaii, the eastern extremity of the territory. This is the second in intensity in the entire lighthouse service, the greatest being the Farallones light off San Francisco, the reflection of which is visible 65 miles at sea, although actually visible only 21 miles because of the earth's curvature.

Essay On Australia

Free Trip To Commonwealth For High School Pupils

L. R. Macgregor, Australian trade commissioner to Canada, announced that E. W. Beatty, president of the Canadian Pacific Railway, had consented to act as chairman of a central committee to decide which Canadian high school pupil writes the best essay on Australia and gets a free trip to the Commonwealth.

The committee contains one woman, Miss Evelyn MacDonald, of the Canadian Teachers' Federation. Other members are: J. W. Daffoe, editor of the Winnipeg Free Press; George Pelletier, managing director of Le Devoir, Montreal; Georges Bouchard, professor at Laval University, Montreal; Gilbert Jackson, professor of political economy at the University of Toronto; A. S. Noad, assistant professor of English at McGill University, Montreal.

BRITISH MAKERS OCCUPY LARGE AREA AT AVIATION SHOW

This picture shows a general view of one corner of the Aviation Show at the Grand Palais, Paris, which was opened recently by President Lebrun. In the foreground can be seen some of the British exhibits, the closest of which is an "A.W. Scimitar 35 Siddeley Panther".

Millions now enjoy this NEW FREEDOM FROM COLDS

for FEWER Colds

At the first warning sneeze or nasal irritation, quick!—apply Vicks VapoRub—just a few drops up each nostril. Its timely use helps to prevent many colds—and to throw off colds in their early stages.

for SHORTER Colds

If a cold has already developed, use Vicks VapoRub, the mother's standby in treating colds. Just rubbed on at bedtime, VapoRub works through the night by stimulation and inhalation to help end a cold. No "dosing."

These twin aids for fewer and shorter colds give you the basic medication of Vicks Plan for Better Control of Colds—clinically tested by physicians and proved in everyday home use by millions.

(Full details of this unique Plan in each Vicks package)

VICKS PLAN FOR BETTER CONTROL OF COLDS

WHAT DOES YOUR HANDWRITING REVEAL?

By LAWRENCE HIBBERT
(Grapho-Analyst)

(All Rights Reserved)

(Editor's Note: These human interest problems, with which this well-known author is dealing, are similar to those that trouble so many of our readers. Can this Handwriting Expert help you? A friendly word, some cheerful advice, will often help you to bear your troubles easier. See the author's invitation following this article.)

"Sally," which is a nom-de-plume covering the identity of a young lady living in the West, writes as follows: "My problem is, I suppose, similar to that of many girls in business to-day. I happen to be fairly good-looking, and my boss, who is, by the way, a married man of 38 years of age, keeps asking me to go out with him. Now I am not particularly staid, I enjoy good times, and am fond of getting around and, to be quite frank, I am not worried over much about the moral angle in this case, because I happen to know that my boss does not get along with his wife. What kind of a man is my boss? Does his writing tell you whether he is honourable and do you think he is the type of man with whom I can go out occasionally, without any serious results? My own age is 23."

This is a rather different angle to this age-old problem. Generally, the layman would lay it down as an axiom that a single girl should not go out with a married man—and it is still very true that a girl lays herself open to unhappiness by encouraging the attentions of a married man.

However, I do not intend to place any stress on this feature in this case. The man's writing is so informative as to his mentality and character that a partial analysis of it should suffice to warn my correspondent.

The writing of this man reveals an overwhelmingly conceited personality. He has an amazing impression of his own importance in the scheme of things, and, to be quite frank, he thinks the sun rises and sets on himself. His writing is very plain in this respect.

And there is another feature of it which would be enough to warn any girl to leave him alone. He is deceptive—not to be trusted for a moment. Naturally shrewd in business, he is something of a hypocrite, too, but his deceptiveness sticks out like a milepost.

Leave him alone, "Sally." He can do you no good, and I don't believe that his intentions are straightforward. Probably, if you were to know the real truth of his relations with his wife, you would find that he is the one to blame. In any case, discourage his attention. Give him no encouragement. After a while he will get tired of constant rejections, and turn his attention elsewhere.

Mr. T.—Writes: "I am 17 years of age, and my parents are very keen on my going to college. I have always had an idea that I should like to be a doctor, and my parents are offering me the opportunity to study medicine. But I now feel that I would like to be earning money, and a friend of mine has an opening for me in an office, at quite a fair salary. What would you advise?"

There can be no hesitancy here, my friend. You would be very unwise to give up your earlier ambitions regarding becoming a doctor, for the very temporary importance and self-satisfaction that money would give in the other job. You would be sorry for it in years to come. In this case, I can confirm your parents' advice. Go to college.

What is the story behind your handwriting? Do you want to know the real truth about yourself—and your friends? The author will tell you the unvarnished truth. Send specimens of the writing you want analysed, stating birthdate in each case. Enclose 10c coin for each specimen, and enclose with 3c stamped addressed envelope to: Lawrence Hibbert, care of Winnipeg Newspaper Union, 175 McDermot Ave., Winnipeg, Man. Letters are confidential and replies will be mailed as quickly as possible, but please allow at least two weeks for your reply.

Of the five thousand women and girls reported missing in London annually, ninety-five per cent. turn up sooner or later.

Not Altogether New

Chinese System Practised Centuries Ago Resembles "New Deal"

How old is President Roosevelt's New Deal? Or any other present-day scheme of economics, including matters of relief, farm administration and control of production? Marco Polo, who travelled across the desert to China nearly 700 years ago and became the friend and aide of the Grand Khan, seems to have found systems in operation which bear striking resemblances to the economics of 1934. Here are some of them culled from the Everyman edition of "The Travels of Marco Polo":

"Paper currency is circulated in every part of the Grand Khan's dominions; nor does any person at any time at the peril of his life refuse to accept it in payment."

"It may certainly be affirmed that the Grand Khan has a more extensive command of treasure than any other sovereign in the universe."

"The Grand Khan distributes large quantities of grain to his subjects. He provides in like manner for their clothing."

"Not a day passes in which there are not distributed 20,000 vessels of rice, millet and panicle. By reason of this admirable and astonishing liberality which the Grand Khan exercises toward the poor, the people all adore him as a divinity."

"In the case of dearth, he furnishes them from his granaries with so much corn as is necessary for their subsistence as well as for the sowing of their land. He also refrains from exacting the usual tribute."

"In like manner if there is a mortality of cattle in any district he makes good the loss to the sufferers. Moreover, he does not demand the tenth of the increase for three years."

"So great indeed is the quantity that if every individual be permitted to search for them, their value would become trifling. Hence fishery is prohibited to all who do not obtain a license."

"No person dare work the silver, gold or ruby mines under pain of death, unless he obtains his majesty's license. These articles cannot be exported without his permission, for he thinks his credit is connected with them and hence he wishes to maintain their high price."

In this respect there does not seem to be anything new under the sun.—St. Thomas Times-Journal.

Relic Of Past Ages

Interesting Discovery Of Inter-Glacial Period In Saskatchewan

Many thousands of years ago, a beaver or some similar animal cut down a small tree at Candiac, east of Regina. A piece of the wood with the tooth marks still distinct was found in the clay 18 feet below the surface when a well was dug on the farm of John Malach, and has been sent to the department of geology at the University of Saskatchewan.

Professor F. H. Edmunds said that the material was either deposited shortly after the glacial period or in an inter-glacial period. It was an indication that the beaver or some similar animal inhabited the prairies many thousands of years ago. The tooth marks are about one-eighth of an inch broad.

Surgeon—"You seem to have a lump on your chest that I will have to get rid of."

Client—"That should be easy for you, doc. It's my pocketbook."

The creatures in the Bronx zoo require 124 different kinds of food from all parts of the world.

Your mistakes may contribute to the wisdom of others.

Methods Used By Authorities To Guard Against The Spread Of Insect Pests At Exhibitions

The outstanding success of Canadian grain growers at international exhibitions, notably at Chicago recently, are not mere matters of chance. They are indeed striking evidence of the care exercised by the farmers themselves in selecting pure seed, of the creative and preservative work of the Dominion and Provincial Departments of Agriculture and of the Canadian Seed Growers' Association.

Besides the growing of pure seed, there is the prevention of disease and attacks from insect and other pests. Apart altogether from the well-known results of the efforts of the experts of the Dominion Department of Agriculture in evolving the new, sturdy types of grain that have extended Canada's northern frontier for grain growing and mixed farming, some hitherto unknown duties of government officials in preventing and stamping out disease at the leading exhibitions have just been brought to light at the recent meeting of the Entomological Society of Ontario.

At the World's Grain Exhibition at Regina in 1933 and at all exhibitions of grain and stock the same exacting details, and a similar amount of scientific knowledge must be observed and applied. For example, at the World's Fair at Chicago in 1933 when insect pests and plant diseases were not so well understood by the general public, it was found necessary to destroy the entire collection of exhibits from many countries owing to infestation by insects. But, both at Chicago in 1934 and at Regina in 1933, matters were entirely different. The exhibitors themselves were better informed and the authorities saw to it that these exhibitions were not the meeting place of pests and disease from all parts of the world.

A definite line of procedure is followed in handling, inspecting and sampling exhibits for such an exhibition as the World's Grain Show. The exhibits were first marked by a representative of the exhibition, then passed to an entomological inspector who made a thorough examination, and who in turn passed the exhibit to a plant pathologist. After being passed by the plant pathologist the samples were taken by a seed inspector for the germination and field tests when required. When the samples were drawn, the metal scoop used was disinfected in methyl alcohol after each sample was taken, and, in the case of samples for field growing tests, all were dusted before shipment with a mercury preparation under the supervision of a plant pathologist. All exhibits of corn on the cob were superheated to guard against the European corn borer, and further it was necessary for exhibitors from foreign countries to present a bill of health for their exhibits.

The germination and field tests of grain and other exhibits to determine the purity of strain and ensure no substitution of varieties entailed a great deal of work at Regina. This judging was entirely in addition to the judging on physical appearance of the exhibit. This meant that if it were necessary to fumigate or treat any exhibit as a precautionary measure, the fumigant used must not injure the physical appearance of the grain nor affect its germination. Suitable fumigants were evolved after careful and critical experiment by the Cereal Division and the Seed Branch of the Dominion Department of Agriculture in co-operation. The Cereal Division made a physical examination and field germination test of the treated material and checks, while the Seed Branch carried out germination tests of the treated and untreated material in accordance with the procedure followed in the Canadian germination tests for commercial seed. Ultimately at the close of the exhibition, all display material not returned to the country of origin was destroyed in the Regina incinerator under the supervision of entomological inspectors and customs officers. Meanwhile, throughout the exhibition both the competitive and display exhibits, as well as the surplus material, were kept under close observation for outbreaks of stored product insects, but no trace of them was found.

Friend—I hear all your daughters are married now.

Wholesale Merchant—Two are sold off, three are on order, and one is still in stock.

Plants can be transplanted more successfully from a dry region to one with more moisture than the reverse.

W. N. U. 2079

New Highway Planned

British Columbia And Alaskan Road Would Cost Around Fourteen Million

"It would be an adventure to be able to drive north, to follow the route into the country of the gold-seekers of '98. It is an adventure of which motor tourists in thousands will avail themselves. They want to go north to Alaska and the Yukon."

Ray Clark of Wenatchee, president of the Okanagan and Cariboo Trail Association, thus expressed the possibilities which the proposed British Columbia and Alaskan highway affords, in speaking before the engineering bureau of the board of trade at Vancouver.

Mr. Clark was preceded by Col. J. M. Rolston, D.S.O., who conducted the preliminary aerial and ground surveys of the proposed route through British Columbia to the Yukon border some years ago. Col. Rolston told of the work carried out in this connection, of the different possible routes over which he had flown, and of the route chosen.

This was via Hazelton and up the Skeena and Klappan rivers to Dease lake and on to the lower end of Tashlin lake and thence across to Atlin.

Any route east of the coast range would be the cheapest, he said, and estimated the cost along the proposed route at approximately \$10,000 a mile. It offers no great engineering difficulties and would be quite as cheap to build as any road through British Columbia, he added.

There are five great benefits which will accrue to Canada, Alaska and the United States when the road is built, Mr. Clark declared. These are:

Development of the great natural resources in the area tapped by the road.

Development of the international tourist traffic.

Development of good will and trade between Canada and the United States.

Assistance to future aerial travel.

Development of greater tourist travel on the coastal vessels, through tourist travelling by road one way and returning by boat.

The cost of the scheme has been estimated at around \$14,000,000, of which about \$10,500,000 would be spent upon construction in British Columbia and the Yukon.

Major W. G. Swan, chairman of the bureau, explained that 700 miles of the road are already built, as far as Hazelton. There remains 600 miles to be constructed to the British Columbia-Yukon border, 530 miles in the Yukon and 270 miles in Alaska.

More Contact Needed

To Enable Governments Of Empire To Discuss Matters

There will certainly be no lack of subjects to discuss in the preliminary conversations which must prepare the ground for the next Imperial Conference, due to be held in 1936. The King celebrates next year the twenty-fifth anniversary of his accession to the throne. There will be a great gathering of Dominion statesmen in London to take part in the rejoicings, and the opportunity no doubt will be taken to discuss informally but all the more usefully, the questions which have arisen since the conclusion of the Ottawa agreements. Experience has shown that these agreements have been of great benefit and have increased the trade both ways between Great Britain and the Dominions at a time when international trade as a whole has been stagnant or even declining. Naturally it has also exposed defects and omissions and has revealed differences of interpretation which call for adjustment at the next conference. Perhaps what has been demonstrated most clearly is the necessity for machinery to ensure more frequent, if possible continuous, contact between the Governments of the Empire, enabling them to discuss each point of difference as it arises and to adjust their policies to constantly changing circumstances. — London Times.

Among some African tribes the doctors, and not the patients, take the medicine.

Seeing a dog stretching himself, a boy, aged 5, cried: "Aunt! Do look at Billy yawning with his back legs!"

There are now 18,032 ships sailing the seven seas equipped with radio.

PERSONALITY

—Grant in Review of Reviews, London.

Grade "A" Medium Eggs

The Egg Market Situation From The Consumers' Standpoint

Canadian housewives, particularly in the larger centres, are passing up a good bargain in not buying more Grade "A" Medium eggs, stated W. A. Brown, chief of the poultry services of the Dominion Department of Agriculture, in commenting on the present egg market situation from the consumer's viewpoint.

Reports coming to Mr. Brown from the various egg inspection offices under his jurisdiction state that the public is buying Grade "A" Large and Grade "A" Pullet eggs freely, but for some reason are neglecting the Grade "A" Medium.

Mr. Brown points out that all Grade "A" eggs are fresh and of good quality, the only difference between Large, Medium and Pullet being in size. The minimum weights per dozen are 24, 22 and 18 ounces respectively. The retail price on Grade "A" Large in Montreal to-day is 45 to 49 cents. On that basis Grade "A" Medium eggs are worth at least 41 cents, but they are actually selling at 33 to 36 cents.

Eating For Health

Food Habits Can Contribute To A Long Life

That prolonging life at its prime is now largely a matter of proper diet and to that extent is something each individual can do for himself, is the lesson from the newest knowledge of nutrition, according to Dr. H. C. Sherman, Professor of Chemistry, who affirms that, instead of "digging his grave with his teeth," man can now make his food habits contribute to health and long life.

Man now has "the option of a longer lease of healthier life, of an earlier and longer prime of life, of more buoyant health throughout the whole life-cycle, as the result of taking a larger proportion of the needed calories in the form of the protective foods," Dr. Sherman states. And by protective foods he means milk and its products, fruits, vegetables and eggs.

Developing Air Mail Service

Sir Philip Sassoon, under-secretary for air, in London, announced in the House of Commons the government had under consideration a scheme of imperial airmail development that would provide eventually for air carriage of all first class mail. The plan calls for increased frequency of service and expedition of schedules.

Climatic Changes

Recession Of Glaciers Is Advanced As Reason For Drouth Conditions

The gradual changes in climate conditions that have brought drouths to Western Canada and parts of the United States may be caused by the recession of glaciers in the Canadian northwest and Alaska. The theory is being studied by a committee of the British Association for the Advancement of Science.

The scientists have found that the warm winds of the Pacific are not only demolishing great ice sheets in the Atlin, B.C., district but are hollowing out a path across northern Canada on their way east. Formerly they were diverted by ice fields in the north. They passed through southern British Columbia to drop their moisture in rain on the Canadian and United States prairies.

Now with less ice each year in the north and no mountains to precipitate their moisture, the winds reach the 9,000-foot ice cap of Greenland. The change, Mr. Cotsworth says, seems to be making Alaska warmer and Greenland colder.

Not Always Imitative

Woman Invents Device For Finding And Identifying Radio Stations

Nearly all the psychologists agree that the feminine mind is quick and intuitive, but always imitative, never inventive. And now, with the example of Mrs. Richardson of Shepherd's Bush before them, they can guess again, for she has won the first prize at the International Exhibition of Inventions with her device for finding and identifying radio stations. She may puzzle the psychologists, but will surprise nobody who has seen the improvements any woman can make with string, hairpins, match sticks and other simple tools, on the crude man-made gadgets of her own kitchen. But woman still rocks the cradle by hand.—Manchester Sunday Chronicle.

Butter Production Down

November butter production in Saskatchewan was down one per cent, as compared with the output in November of last year, according to a bulletin issued by the department of agriculture. Production was 712,822 pounds as compared with 720,150 pounds in November, 1933.

Translations of the Scriptures were made in 11 additional languages last year, according to a London Bible society.

Will Sink Shaft Two Miles Into The Earth To Determine What Is Beneath In Lower Stratas

History Of Pioneers

Stones In Old Cemeteries Yield Information That Is Valuable

The Brockville Recorder says for a number of years it has been the hobby (rather patiently endured by their relatives) of two Leeds and Grenville men to make their way into the rural cemeteries of their district in Ontario and at the expense of their clothing, to climb or vault tottering fences, lift fallen or broken stones from the mould and attempt to copy those inscriptions which remain decipherable.

Some very queer things have been discovered in the 70 or more cemeteries that have been visited—strange inscriptions and stranger epitaphs. The result of these labors forms, however, a virtual catalogue of the early residents of this section of Ontario, one of the first to be settled, and thus an invaluable collection of information incapable of duplication.

Tombstone-hunting or graveyard-surveying is not, therefore, pure frivolity, like the "scavenger-hunting" that it may be in process of replacing. It represents a serious effort to record genealogical information before it has passed out of existence, and should the practice, or pastime, spread to Canada (where the habitual state of country cemeteries would suggest prompt action), it may be of much value in adding to the store of knowledge concerning the pioneers that is being accumulated.

Is Clever Architect

Man With Mentality Of Child Designs Modern Houses

Model modern houses designed by an architect who thinks he is dead have been on show in London at one of the most extraordinary exhibitions ever held. All the exhibits in the show have been made by mental defectives and some of their workmanship displays sheer genius.

Woodcarving by a boy of 14 with a mental age of seven, is described by experts as "literally amazing."

Visitors were told of a man whose normal capacities are so small that he can hardly feed himself. Yet he can answer the most puzzling mathematical problems with hardly a moment's hesitation.

The exhibits were arranged by the board of control (lunacy and mental deficiency) department of the ministry of health. The object was to illustrate how the state is helping to develop the latent talents of mental defectives with beneficial results.

Widows in Korea do not remarry, no matter how young they may be. Even though they have only been married a month, they may not take a second husband.

In 1918 it took a workman all day to make 40 electric light bulbs; in 1919 a machine was invented that made 73,000 bulbs in 24 hours.

Sometimes it's what a woman doesn't say that puzzles a man.

The answer to the greatest of the remaining geographical mysteries is to be laid bare.

Work will begin soon on the shaft that is to be sunk two miles below earth's surface to determine more exactly the content of earth's core.

The two-mile-deep hole is being dug mainly to prove that Sir James Jeans, world famous British physicist, is wrong in his theory of the nature of the inner earth. It will be dug south of Dinant, near the river Meuse, in France, by Felix Kaisin, the Belgian professor who is undertaking the project. Mining engineers will assist in locating the shaft.

Prof. Kaisin takes issue with Sir James' contention that the centre of earth is a fluid, molten mass. He believes the earth is a solid mass and will continue to revolve in space forever. He explained:

"There is no particular reason why I have chosen Dinant as the site for the excavation, it is merely convenient to my other work."

Prof. Kaisin, who has the chair of geology at the noted University of Louvain, Belgium, is 45 years old, of medium height and has a very long and heavy beard which gives him somewhat the appearance of primitive man. He continued:

"I expect the work to require two full years. There will be no workmen actually in the hole because I will utilize a specially built excavating machine of the type used for drilling tunnels. The hole will be approximately five feet in circumference."

Samples of the earth, as the machine brings it to the surface, will be carefully examined by Prof. Kaisin.

The experiment is being financed by the National Scientific Research Fund, of Belgium, and will cost an estimated \$150,000. The fund also financed Picard's first stratosphere ascensions.

Prof. Kaisin has been occupied in solving the problems of earth's inner nature for 25 years and his theory is in direct contrast with that of Sir James Jeans, who declares that the earth's crusts, mountains and depressions are due to the cooling down of the interior of the earth, thus causing the surface to shrink as does an apple skin. On the other hand, says Dr. Kaisin:

"Earth's crust is like the varnish on a globe—just as thin. Geophysically we are to all intents and purposes in the dark. It is rank hearsay to state now what can be found at the centre of the earth."

Professor Kaisin admits it will be a dangerous enterprise but is determined to carry it through despite "the jeers and laughter." He added:

"I intend to go down myself and definitely disprove laboratory scientists' theories. Scientific theories are constantly being disproven and I am convinced we do not know a thing about what is to be found two miles under the strata."

The Kaisin venture recalls that in 1822 John Cleves Symmes, an army officer, petitioned the U.S. Congress for aid in fitting out an expedition into the interior of earth.

He believed earth to be a hollow concentric sphere, with openings at the poles, and the interior to be inhabited. He won considerable support for his theory but failed to get congressional backing.

Good Friend To Birds

Winnipeg Man Has Fed Them Winter And Summer

John A. Hueln is Winnipeg's bird man. During the four years he has resided there he has walked approximately 3,800 miles to carry bread crumbs to feathered friends that frequent Notre Dame park in the west end of the city.

Three times a day during the summer months the 71-year-old veteran makes his way to a sheltered corner of the park where his approach is heralded by a whirr of wings.

The distance from his home to the park is roughly half a mile. Two visits daily are made during the cold winter months.

The simple explanation of the old gentleman for his daily ritual was: "The excursions into nature keep me young; the exercise keeps me healthy, and watching the little fellows eat affords me the greatest of entertainment."

So long as the world is full of men who would rather listen to a compliment than a criticism, it will also be full of liars.

AEROPLANE LANDS IN THE CENTRE OF PARIS

As part of the program of the recent Aviation Exhibition in the Champs Elysee, Paris, an autogyro, piloted by M. Peoreux, landed outside the Grande Palais to the amazement of a large crowd of people. Here we see the aeroplane on the point of landing in front of the huge building.

DALY'S Dry Goods Pre-Inventory SALE

Prices effective from Saturday, January 19 to Saturday, Jan. 26.

LOT NO. I—

MEN'S WORK BOOTS

Well constructed, with dependable quality leather uppers and Panco soles and heels. This lot consists of blacks and browns in sizes 6½ to 10½, but not all sizes in each style. Values to \$4.50. Special—

\$2.97

LOT II—

MEN'S WORK BOOTS

Better grade leather uppers with heavy Panco soles; built for service and comfort. Sizes 7 to 9½. Wonderful value at our Sale Price—

\$3.54

LOT III—

STURDY ALL-LEATHER BOOTS

Consisting of clearance lines; some plain toe, some toe caps in blacks and browns. Every pair solidly constructed with dependable leather soles and uppers. Sizes 6½ to 9. Spec.—

\$3.87

BLACK RUBBER BOOTS

Thoroughly reliable for general wear. Heavy duck lining and double thick black rubber soles, three-quarter length, and extra heavy. Sizes 6 to 10. Regular price \$5.75. Sale Price—

\$5.25

FLANNEL WORK SHIRTS

Navy Blue Flannel, well made, fully cut. Warm and serviceable. Special—

\$1.25

HIP GUM BOOTS

Strong black upper rubber and extra weight red rubber soles. Regular price \$5.25. Special Inventory price—

\$4.75

LADIES' RUBBER OVER-SHOES

Brown or black, in two dome style; light on the feet but warm and serviceable. Sizes 4 to 8—

\$1.38

CHILDREN'S OVERSHOES

All rubber, in two-dome style. Brown only, sizes 9 to 2. Spec.

\$1.29

MEN'S SCARVES

Plaid, genuine Scotch Tartans, fringed ends. Special, each—

\$1.19

Other Assorted Plaid Patterns—

98c

WOOL FLANNEL WORK SHIRTS

Assorted styles and colors, in sizes 14½ to 16½. Values to \$2.50. Special—

\$1.49

LIGHTER WEIGHT GUM BOOTS

Solidly constructed; red rubber soles for long wear; sizes 6 to 10; three-quarter length; regular price \$4.75. Pre-inventory price—

\$4.25

RED FLANNEL SPORTS SHIRTS

Sizes 15 to 16½. Special—

\$1.49

CHILDREN'S SCARVES

Cotton flannel, assorted plaids

29c

CHILDREN'S WOOLEN CARDIGANS

Jersey style, assorted colors. Sizes 22 to 28

89c

Sizes 30 to 34

\$1.19

LADIES' HOSE

Rayon and wool. Silk surface, wool lining, assorted fawns and greys. Sizes 8½ to 10. Spec.—

3 pair \$1.00

FLANNELLETTE SHEETS

Best quality, large bed size—

\$2.59

Slightly Smaller Size—

\$2.29

WHITE FLANNELLETTE

27 inch, good quality. Spec.—

6 yds. \$1.00

LADIES' PYJAMAS

Striped flannellette; heavy quality, mannish style, sizes 32 to 40

\$1.65

Children's sizes—

\$1.49

ABBOTSFORD

Mr. A. H. Horn has been engaged at Matsqui municipal hall for the past three weeks assisting the Clerk. Miss Roberta Ralston has her cousin, Miss Jean Southerland, of Kelowna, visiting her for a week.

Mrs. McDonald and Mrs. R. Wesley were joint hostesses last Thursday at a bridge party in the former's home. Showing a series of lantern slides made from many of his own pictures, Mr. E. H. Cope provided a most interesting hour at the Men's Club last evening, when he depicted scenes of Canadians in Northern Russia during war days of 1918. A large crowd attended and registered their appreciation by a hearty vote of thanks.

Abbotsford Boy Scouts "bun feed" held last Friday, was very successful, twenty-one members and several adults spending an enjoyable evening. Flag drilling, physical exercises and games were undertaken. During the intermission hot dogs, cake and cocoa were served. Floodlight photographs of the troop were taken by Mr. Heller. Preparations for the ensuing dance were made during the evening.

A feature of the dance, which the Troop is putting on in the Parish hall on Jan. 25 will be a waltz competition and the best waltzing couple will be presented with valuable mystery prizes. There will be a free supper and solo numbers by two members of the orchestra, Jack Phillips, piano, and Louis Bevan, violin.

GIFFORD

Mr. Elbert Rust is spending three weeks at Bow, Wash., as the guest of his aunt, Miss Emma Rust.

Mr. and Mrs. Johnson have as their guests Mrs. Phillips and Mrs. Listed of Vancouver.

Mr. and Mrs. J. Black were pleasantly surprised on Thursday evening when a number of friends held a party at their home, observing the birthday anniversary of Mrs. Black.

A pretty shower was held on Saturday at the home of Mr. and Mrs. DeVries, when Miss Marjory DeVries and Miss Goldie Sorenson entertained in honor of Mrs. Ray Wright, a recent bride. A clothes line was hung across the room, weighted with many useful and pretty gifts, which were presents to the bride.

Hospital W. A. Hold Annual Meeting. The annual meeting of the Women's Auxiliary to the M.-S.-A. hospital was held on Tuesday.

Mrs. M. Shore was elected president, making this her fifth term; Mrs. Wainwright was re-elected as secretary and Mrs. R. Gilmore appointed treasurer.

Other officers were: Hon. pres. Mrs. J. M. McDiarmid; first vice-president, Mrs. J. Parton; second vice-president, Mrs. E. Clarke. The Auxiliary, with sixteen active members realized over \$700 this year, slightly bettering the previous year's total.

FOR SALE. — Three good fresh cows. W. Turner. 1p

TRADE. — Ford Ton Truck 1926. Ruxhall; for light delivery. George Smith, Gifford. 1p

CAPABLE GIRL wants Housework; used to children; Abbotsford district preferred. Write Taylor's Service Station, R.R. 1, Mt. Lehman.

Keep Warm....

Keep Fit!

Don't wait until you are rushed to the operating table; heed Nature's warnings. If you are "out of sorts" take cold easily or suffer from minor ailments KEEP FIT by an occasional Japanese electro-hydro treatment. The rate is low and the results positive. Call and see my testimonials.

Why Abbotsford Bread and Cakes are 'Quality'

...Because nothing but the best of ingredients go into the making of our Products—we inspect everything that comes into our bakeshop, and if it isn't absolutely pure, clean and fresh, IT DOESN'T GO IN!

...Because our baking and cooking is supervised by Master Bakers, who are used to producing the finest of foods—men who know how, and able to turn out a perfect product, not once, but DAY AFTER DAY, YEAR AFTER YEAR!

Card of Candidacy

To the Ratepayers of Ward Three, Matsqui Municipality:

It is my intention to stand for re-election as your councillor. Throughout five years service on the Council I think you have found me conscientious and careful of your affairs, and, if re-elected, I shall continue this practical appreciation of your trust.

As you have learned by this time, no councillor or council can work miracles or do the impossible. But among several practical things I shall continue determined efforts to get the Federal government assume the costs of unemployment relief. I shall also try to get the tax interest and penalties reduced. Trusting I have merited a continuance of your support.

L. V. KETTLE

Manifesto

I wish to thank the Electors of Sumas for the confidence reposed in me in the past, and to announce that I shall offer myself for the Reeveship for the ensuing term.

ALEX. I. HOUGEN

Card of Candidacy

To the Electors of Ward One, Sumas Municipality:

At the request of a number of ratepayers I have decided to stand for office of Councillor at the coming municipal elections. If elected, I will try and fill the office to the best of my ability. Your vote and influence is respectfully solicited.

FRED MATTHEWS

CARD OF THANKS

We wish to express our gratitude and thanks for the many acts of kindness and expressions of sympathy and beautiful floral offerings on the occasion of our recent sad bereavement in the loss of a loving husband, father, son and brother. RUTH GUSTAFSON AND CHILDREN
